

Oracle Cloud Health Assessment

Maximising your cloud investment

Unrealised potential from cloud

While many companies have benefited from the move to Oracle Cloud, not all implementations go as planned. Business models or market conditions can change. Poor employee adoption or high operating costs can result in inefficiencies. Add to this the continuous Oracle releases demanding skilled functional and technical resources, and an enterprise can quickly deviate from a desired target operating model state.

So, how do you get back on track and enhance your cloud investment? A KPMG Oracle Cloud Health Assessment may be just the answer you are looking for.

When is an Oracle Cloud Health Assessment right for your business?

- Business growth, new stakeholders, mergers and acquisitions are impacting delivery of services.
- Turnover of key team members has left knowledge gap.
- Not experiencing expected return on Oracle investment.
- Back-office functions across finance, HR, and/or supply chain are perceived as inefficient/costly.
- Same processes recreated in a new system ('lift and shift') that could be administered more efficiently.
- Difficulties keeping up with Oracle new release functionality.
- Manual processes still performed outside of Oracle.
- Initial configuration no longer supports business needs.

Our proven approach

Our Health Assessment will enable us to provide your organisation with specific recommendations for improving how you deliver your services as well as optimising Oracle across your finance (including EPM procurement), HR, and/or supply chain organisations so you can realise the intended return of your Oracle investment.

Cloud transformation isn't a project – it's a journey and a commitment to continuous innovation.

Oracle's latest advancement is Redwood, a state-of-the-art user interface designed to provide an intuitive, consistent, and modern experience across all Oracle Cloud applications.

What to expect with Redwood

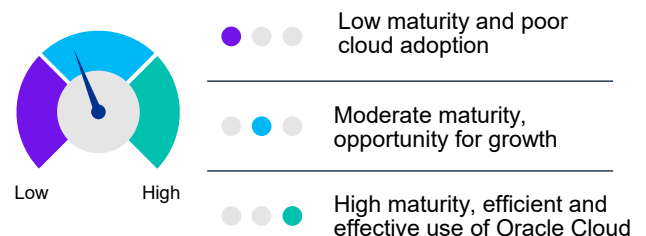

- Engaging, modern user experience
- Streamlined pages with fewer clicks
- Greater personalisation and adaptability
- Natively embedded AI/gen AI

The time for Redwood is NOW

Customers currently live with Oracle Cloud HCM need to make the transition to Redwood by 25B release. KPMG Oracle Cloud Health Assessment will evaluate your Oracle Cloud application for Redwood readiness and develop an Adoption Roadmap that suits your needs.

Diagnostic exercise

With our Oracle Cloud Health Assessment, your organisation can gain an accurate and unbiased perspective of your system's current state, and unveil opportunities for improvement, and to drive value.

Increasing value in your cloud investment

KPMG developed the Oracle Cloud Health Assessment to help clients maximise the return on their investment in Oracle Cloud applications. The Health Assessment is used to identify opportunities to drive increased productivity and/or cost savings of core operational services.

Many organisations are leaving value on the table

27% of companies have adopted more than half of vendor-released features in the past two years.

52% of survey respondents are concerned about missing out on new features that allow for more automation and efficiencies.
