

KPMG global tech report: Technology insights

Tech: A bold sector that innovates while leading by example

KPMG Australia

[KPMG.com.au](https://www.kpmg.com.au)

Executive summary

The digital transformation journey is an important strategic consideration for all sectors, none more so than technology. This means the tech sector has to do two things simultaneously: lead by example and rethink its own strategies.

Yet, like all industries, the tech sector also faces challenges – and opportunities – in the rapidly evolving tech landscape. For example, the [KPMG 2024 Technology and Telecommunications CEO Outlook](#) showed that, in 2024, a top-three challenge for tech and telecommunications CEOs has been the adoption of generative AI.¹

The tech sector's position ahead of other sectors can be attributed to its formula for success. Much of the tech sector's accomplishments are the result of discipline and targeted investments. Through strategic spending decisions, such as the prioritisation of AI and environmental, social and governance (ESG) activities, the industry has become skilled at protecting its transformation progress from volatility.

This and other valuable insights are provided in our Global Tech Report 2024 – a survey of 2,450 executives from 26 countries, including 490 leaders from the tech sector.

Tech stands strong against headwinds, but higher expectations for the sector mean that it is required to respond with clarity and strategic investments.

¹ KPMG 2024 Technology and Telecommunications CEO Outlook

Key findings

The tech sector is targeting profitability

This year's survey reveals an increase in the number of tech professionals who say that technology has directly improved their organisation's profitability over the past 24 months. Some of the most notable growth in profitability, with increases of 10 percentage points or more, has resulted from efforts in AI, data and analytics, everything-as-a-service (XaaS), cyber security and modern delivery.

ESG goals are a key focus for tech's digital investments

Today's tech organisations are recognising the importance of using tech for good. About three-quarters of tech executives report that their tech investments directly target their sustainability and social responsibility goals, surpassing the cross-sector average.

Tech sector plans to maintain a democratised approach with AI experiments

Most sectors are working toward a centralised approach to AI implementation. But the tech sector plans to continue developing AI governance policies and experimentation practices in a democratised way as it builds more experience in this rapidly developing area.

The tech sector is targeting profitability

Today's macroeconomic and geopolitical landscape might be turbulent, but tech companies are continuing to fund digital innovation with confidence and commitment. There are good reasons for this: three-quarters of tech executives (**76%**) say their total cost of ownership and cost-benefit forecasts are usually accurate. Roughly the same proportion say they run calculations to forecast the potential value of a technology before they invest, a figure that is slightly above the cross-sector average.

As a result, tech is one of the sectors most likely in our survey to feel confident in its ability to manage expenditure so that hidden costs do not disrupt the digital transformation.

Mark Gibson, Global Head of Technology, Media & Telecommunications, KPMG International and Line of Business Leader for Technology, Media & Telecommunications, KPMG in the US, says we are seeing a shift in how tech companies spend their money. 'We're seeing a much stronger focus on outcomes than we did before,' says Gibson. 'It used to be all about how much they could invest in research and development, but as tech companies mature, priorities are shifting.'

Gibson says that profitability is paramount in today's economy: 'It's a constant seesaw between wanting to invest in innovation and needing to keep costs down. That's why most tech firms are now on a journey of targeted investment in key transformation areas.'

Increases in percentage of respondents (2023 compared to 2024) who replied that their digital transformation efforts positively impacted their organisations' profitability in five important investment areas

 **+28**

Modern delivery (including low/no code)

 **+22**

XaaS technologies (including public- or multi-cloud)

 **+20**

AI and automation (including Generative AI)

 **+20**

Data and analytics

 **+20**

Cyber security

Q10. Over the past 24 months, have your digital transformation efforts with the following technologies positively impacted your organisation's profitability? Those answering yes, there was an increase.

This year's survey shows an increase in the number of tech professionals who say that technology has directly improved their organisation's profitability over the past **24 months**.

There is notable growth in profitability, with increases of 10 percentage points or more from efforts in AI, data and analytics, XaaS, cyber security and modern delivery methods.

Case study

Sierra Wireless

Helping to ensure trust in IoT solutions

As a major global IoT solutions provider, Sierra Wireless utilises manufacturing facilities around the world – delivering innovative technologies that are enhancing operational efficiencies and customer experiences for some of the world's leading organisations.

The Canadian-based multinational, which is particularly proud of its nearly 30-year record of building trusted client relationships across an array of industries, was forced to take decisive action as its operations, including manufacturing, were temporarily disrupted in March 2021 by a ransomware attack on the company's internal IT systems and corporate website.

Sierra Wireless immediately countered the attack – turning to KPMG firms' cyber-incident response specialists from Canada and the UK to assist with response and recovery efforts.

Sierra Wireless leaders worked closely with KPMG's cyber professionals to resolve the root cause of the ransomware attack and contain and recover the disrupted operations. As part of the larger recovery effort, KPMG in Canada and KPMG in the UK were able to prioritise and recover Sierra's manufacturing operations within days. In the wake of the incident, KPMG and Sierra Wireless professionals worked together to enhance Sierra's IT operations and cyber-security program.

Sierra Wireless' IoT solutions help customers in industries such as transportation, healthcare, industrial manufacturing, and energy, transform and thrive in today's connected economy. The timely actions taken in response to this incident helped maintain the trust of these customers in the security of Sierra Wireless's IoT solutions.

ESG goals are a key focus for tech's digital investments

Today's tech organisations are recognising the importance of using tech for good. About three-quarters of tech executives (73%) say their tech investments directly target their sustainability and social responsibility goals, which is above the cross-sector average.

Q9: Which of the following opposing statements best describes your company's technology optimisation activity for the next 12 months?

Source: KPMG global tech report 2024

And perhaps a direct result of using tech for good is the industry's progress in addressing environmental, social and governance (ESG) issues. In fact, our recent [KPMG 2024 Technology and Telecommunications CEO Outlook](#) showed that the number of tech and telecommunications CEOs who are confident about reaching their net-zero goals by 2030 has increased from 36% in 2023 to 46% in 2024.

A large part of this optimism comes from the sector's transformation of how data centres are built and run – and their impact on the environment.

ESG efforts are particularly important to the tech sector's workforce. As Gibson emphasises, 'In tech, employees have high expectations for each of the three areas of ESG. Not only do they want to see thoughtfulness around environmental impact, but they also hold the industry responsible for the way in which information is spread – particularly around key social and political issues.'

The good news is that KPMG research confirms that tech organisations are taking their employees' opinions seriously, with tech being one of the sectors most likely to prioritise tech investments based on employee feedback (5 percentage points above the global average).

This has important implications for the 'governance' part of ESG as organisations work to ensure they have both the right policies in place to address ESG challenges and the ability to be a voice for their workforce. According to Gibson, the tech sector has a huge responsibility related to cyber protection and the way in which the sector manages and shares information. 'ESG is about the future of the industry from a people perspective,' he says. 'That's why tech organisations must focus on protecting people's data and having the processes and controls in place to build consumer trust as part of their formulas to getting ESG right.'

In tech, employees have high expectations for each of the three areas of ESG.

Tech firms plan to keep a democratised approach with AI experiments

Appetite for AI is growing across all sectors, and many companies are taking a democratised approach while they encourage their workforces to find new ways to use it. But as they scale AI, while keeping governance, trust and security at the center, most sectors are switching to a more centralised approach.

How tech executives say they plan to scale AI within their organisations

Q24: How does your organisation plan to scale its AI with governance, trust and cyber security in mind?

Source: KPMG global tech report 2024

² KPMG global tech report 2024

³ KPMG's Leading the charge on AI

Here, the tech sector bucks the trend, as centralisation is not on the roadmap. Instead, tech companies plan to maintain their democratised approach to AI experimentation, while continually developing their AI governance policies as they build more experience in the area.

Gibson notes, 'We want everyone in a tech company experimenting and using AI daily. Yet, it's important to balance this with a centralised governance layer so companies have a framework for their workforces to operate within. This should allow tech companies the space to continuously adapt and refine their AI strategies while protecting their values, security and customers.'

According to our [KPMG global tech report 2024](#), successful AI implementation will require the tech sector to take a systemic approach² that is based on cross-functional effort. From building strategic frameworks to upskilling teams and identifying risks, tech is uniquely positioned to lead the way across this new frontier with confidence.

The earlier you appoint a chief artificial intelligence officer (CAIO), the easier it is to shape and coordinate the transformation before business units and functions have invested in similar capabilities. In addition, first movers may secure scarce CAIO talent in the external or internal market before they become even more in demand.³

Key recommendations

To lead by example while fostering innovation, tech executives should:

- Prioritise trust and security in the initial phases of designing solutions. With tech rapidly evolving, designing and building solutions in a responsible way is now more important than ever. Including cyber security experts at the start of every project can enhance trust and protect brand reputation. It can also help minimise the risk of data breaches and the need for costly retrofitting of security fixes.
- Turn ESG into a competitive advantage by implementing embedded strategies that address environmental and social risks while capitalising on commercial opportunities. [As technology plays a crucial role](#)⁴ in integrating ESG into strategic processes, the tech sector has an opportunity to thrive and make a real difference in this space. To do so, it needs to improve its own processes while also building solutions that help other sectors do better.
- Lead successful AI adoption by ensuring that all departments work together and AI value is communicated clearly and with a strong connection to departmental business objectives. To help the sector move beyond the AI hype, KPMG has identified five key areas for organisations to focus on: delivering value, unlocking capabilities, building trust, scaling with confidence and architecting transformation. Our [global tech report](#) elaborates on each of these.

In line with the [KPMG 2024 Technology and Telecommunications CEO Outlook](#),⁵ this research shows that there is optimism about growth in the tech sector. To navigate new technologies such as generative AI alongside environmental and economic challenges, tech companies will have to remain disciplined and strategic during their transformation journeys.

How KPMG can help

Transformation is an ongoing journey

There's no quick fix for today's business challenges. Major changes are commonplace and often happen in parallel, involving more stakeholders, with more at risk and more complex decision-making required.

All this can put relentless pressure on you, your people and your broader ecosystem. This journey of constant change is unpredictable, but how you approach it should not be. The KPMG Transformation Journey helps you navigate these shifting end points, helping you to deliver the results that matter.

But the journey doesn't end here. We combine advanced technology, in-depth experience and operational excellence to continually evolve your processes, working on a subscription-as-a-service basis.

With KPMG Managed Services, we help you create nimble, scalable business functions that evolve as you grow and pivot quickly amid changing priorities. That's how to accelerate and sustain your transformation journey and stay ahead of competitors – while helping minimise disruption and risk. [Learn more.](#)

ESG

KPMG, as a global organisation, knows the intrinsic power of ESG to transform your business, and KPMG professionals can show you how to enhance trust, mitigate risk and unlock new value as you transform and work to build a sustainable future. Our services are holistic and practical, and we are able to guide your teams to drive sustainable innovation across your organisation.

Through industry-leading expertise, data-driven technology and global alliances, KPMG professionals' experience across critical ESG issues means we can assist you in creating the right roadmap for your journey, putting ESG at the core of your operations – where it should be. [Learn more.](#)

You can with AI

In the AI era, anything seems possible – untapped value, constant innovation, new frontiers. Especially with a knowledgeable guide by your side.

We help clients harness the power and potential of AI. From strategy to implementation. Small steps to helping solve seemingly impenetrable problems. Underpinned by trust.

You can discover endless opportunities with AI. Let KPMG show you how. [Learn more.](#)

KPMG Trusted AI Framework

KPMG Trusted AI Framework can help with designing, building, deploying, and using AI tech solutions in a responsible and ethical manner, seeking to accelerate value with confidence. [Learn more.](#)
