

Identity as a Service

Operationalize your growth ambition while minimizing disruption and risk

Digital transformation is critical for today's leading organizations to grow and prosper. But the growing use of cloud-based services brings with it new risks. How do you manage sensitive data being accessed by users across different geographies and from multiple devices? Stay on top of regular security patches and upgrades to overcome potential vulnerabilities? All while meeting the growing expectations for improved, personalized user experiences, combined with the multitude of additional business pressures facing your organization?

As a CIO, CISO, or CTO, you understand the numerous applications your organization uses to manage sensitive business, customer, and employee data. Ensuring those applications are efficient, secure, continue to meet regulatory requirements, mitigate risks, and serve the needs of your organization, requires skilled talent and ongoing strategic focus.

In the past, much of this work was done manually, but a manual process is time and cost intensive – and prone to errors. In addition, Identity and Access Management (IAM) has become a key issue – get it wrong and operations can grind to a halt.

Enhance visibility and control. Provide easier and more timely access to authorized users

KPMG's Identity as a Service offers the advanced technology, innovative accelerators, business and industry, and skilled talent to implement and maintain IAM throughout your organization. We help you onboard applications, and design, implement and manage access provisioning and deprovisioning.

Our service standardizes IAM processes within your organization, reducing risks and ensuring our combination of technology and skilled resources address issues consistently, efficiently, and cost-effectively.

And we go beyond the back office, cost savings, and technology to deliver implementation and post implementation IAM services, and go-live support. KPMG's IAM as a service allows you to out-task daily, monthly, and quarterly business and service operations with confidence, efficiency, and accuracy, allowing your people to focus more on strategic initiatives and profitable growth. You can benefit from:

Skilled, global resources

a highly skilled, certified IAM team manages your Identity as a Service operation, with any-shore delivery.

Reduced risk

by putting greater focus on IAM system health, you'll improve the reliability and upkeep of critical security systems.

Compliance enablement

our experienced team designs, builds, and operates IAM controls that deliver improved compliance and reporting.

On-going support

our services provide benefits from day one, while ensuring your operations are managed and supported throughout your IAM journey.

Lower, predictable costs

a monthly subscription provides fully predictable operational costs, reduced by up to 30%.

Agile capabilities

we offer operations and functions that flex with your changing needs, now and in the future.

Why KPMG

A combination of technology, intelligence, and hands-on orchestration, KPMG's Identity as a Service is designed to enhance performance, protect assets, and improve compliance — offering a tested approach to maintaining critical business functions on the leading edge.

KPMG's Identity as a Service is different from traditional models based mainly on labor arbitrage for transactional work. Instead, we combine advanced technology, deep functional and sector, and leading practices to take responsibility for knowledge-intensive processes across your enterprise, while driving strategic outcomes.

Our services are tech-enabled but strategy-led.

We understand how your business operates.

We bring the board-level credibility, broad experience, and subject-matter knowledge that has underpinned the KPMG brand for 150 years.

We know how to leverage technology.

We deliver strategic results that matter.

We're on your side, shoulder to shoulder, all the way, from vision to value.

When you face all that's in front of you with KPMG beside you, aspirations become reality.
