Spotlight on IFRS

Q2 2024

kpmg.ca

Quarterly update

KPMG Spotlight on IFRS: The Accounting and Financial Reporting milestones in the quarter ended on June 30, 2024.

As discussed in our Spotlight on IFRS – March 2024, there were a number of regulatory events that continue to drive toward increasing reporting and transparency of sustainability reporting.

The first to act was the Securities and Exchange Commission (SEC), which released its final Climate Disclosure rule. After the release of its final rule, the SEC faced numerous legal challenges and issued an order in April to stay its new climate rule, allowing time for the upcoming judicial review.

The Canadian Sustainability Standards Board (CSSB) also released proposals on its first two Canadian Sustainability Disclosure Standards (CSDS). The CSSB has aligned with the International Sustainability Standards Board (ISSB) IFRS® Sustainability Disclosure Standards to support global interoperability. It is addressing implementation concerns of Canadian companies by deferring adoption dates and seeking feedback on key areas, including timing and climate resilience requirements.

Due to increased expectations from multiple reporting regimes and investor's demand for transparent and comprehensive climate reporting, global companies are facing challenges in applying multiple new reporting requirements. Companies are seeking guidance to continue their sustainability reporting initiatives and efforts.

To address these concerns, in May 2024, the ISSB and European Financial Reporting Advisory Group (EFRAG) jointly published *Interoperability Guidance*, a detailed comparison of their respective climate-related reporting requirements. This is a milestone towards achieving interoperability among the major sustainability standards. Furthermore, the *Inaugural Jurisdictional Guide* for the adoption or other use of ISSB Standards was published in May to promote global consistency and comparability in climate and other sustainability-related disclosures.

The ISSB recognizes the importance of working with other standard setters to achieve a coherent global reporting landscape and minimize the burden on those reporting under multiple frameworks.

We have a number of resources to help you with sustainability related financial reporting topics as follows:

- *Sustainability reporting resource centre* - which features a range of high-level visual overviews, video blogs, articles and analysis to help companies get ready for the ISSB Standards.
- *IFRS Today* webpage - which includes podcasts and articles on emission schemes, net-zero commitments, climate related matters and other changes in the financial reporting landscape that are relevant for all companies.
- *Financial reporting in uncertain times resource centre* - which features a range of articles, blogs, and podcasts to explore the potential accounting and disclosure implications.
- *Climate change financial reporting resource centre* which provides additional resources to help you identify the potential financial statement impacts for your business of climate-related risks and opportunities.

There are also several IFRS® Accounting Standards requirements effective from January 1, 2024 that companies with a calendar year end will already be required to apply. Further information on these new requirements is outlined in section *Requirements effective in 2024*. In addition, although not effective in 2024 or 2025, companies should be aware that the IASB published new Accounting Standards IFRS 18 *General Presentation and Disclosure* and IFRS 19 *Subsidiaries without Public Accountability: Disclosures*, and also issued new amendments to IFRS 9 and IFRS 7 – *Classification and Measurement of Financial Instruments*. The latest information on the new standards and amendments are provided in the below sections, *Major projects and new Accounting Standards* and *Other developments.*

Also, refer to our *Guides to financial statements* – which includes an update to interim financial statements for disclosure requirements effective in 2024.

27 Appendix 3: ISSB work plan

Sustainability (ESG[1]) reporting update

In this section, we focus primarily on recent sustainability disclosure standard setting activities, sustainability-related regulatory updates and the potential impact of sustainability matters on financial statements.

Sustainability disclosure standards and regulatory update

ISSB developments

The ISSB was established in response to demand for globally consistent, comparable and reliable sustainability reporting, and it published its first two IFRS® Sustainability Disclosure Standards in June 2023. For additional background and information, as well as a discussion on the connectivity in reporting, refer to this *article* by the International Accounting Standards Board (IASB) Chair Andreas Barckow and ISSB Chair Emmanuel Faber.

The following standards are designed to be applied together and alongside future topic- or industry-specific standards:

- IFRS S1 *General Requirements for Disclosure of Sustainability-related Financial Information* (general requirements standard); and
- IFRS S2 *Climate-related Disclosures* (climate standard).

The general requirements standard sets the foundation for sustainability reporting, defining the scope and objectives of reporting and providing core content, presentation and practical requirements. It requires a company to disclose material information about sustainability-related risks and opportunities that could reasonably be expected to affect its prospects – across all relevant disclosure topics – not just on climate and includes suggested reference materials for topics other than climate. The climate standard replicates the core content requirements and expands on them with climate-specific requirements.

These standards are effective for fiscal years beginning on or after January 1, 2024. However, individual jurisdictions decide whether and when to adopt the standards into local requirements. Consultation activities are underway in Canada regarding adopting the standards (see below for commentary on the work of the Canadian Sustainability Standards Board and the Canadian Securities Administrators).

The ISSB acknowledges the difficulties and challenges in implementing the new standards due to the existence of multiple standards and frameworks from different standard setters. To address this, the ISSB is collaborating with other standard setters to support interoperability.

Connected information

Companies will need to ensure that the information they provide enables investors to understand the connections across their general purpose financial reports, including the financial statements, sustainability-related financial disclosures and the MD&A.

Sustainability-related information is to be reported for the same period and at the same time as the annual financial statements, subject to transition relief.

Suite of optional transition reliefs

In response to practical concerns in adopting the new standards, transition reliefs are available in the first year of adoption.

The full complement of transition reliefs would allow companies in the first year of adoption to not:

- Provide disclosures about sustainability-related risks and opportunities beyond climate-related information;
- Provide annual sustainability-related disclosures at the same time as the related financial statements;
- Provide comparative information;

[1] Environmental, Social, and Governance.

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

- Disclose Scope 3 greenhouse gas emissions; and
- Use the Greenhouse Gas (GHG) Protocol to measure emissions if they are currently using a different approach.

In addition, companies that only report on climate-related risks and opportunities in the first year of reporting will have relief from providing comparative information about their sustainability-related risks and opportunities beyond climate in their second year of reporting.

Future focus of the ISSB

The ISSB finalized its agenda priorities for the next two years. Its time will be divided among the following activities:

- supporting the implementation of IFRS S1 and IFRS S2 through various activities, such as creating educational materials and collaborating with regulators and jurisdictions looking to adopt ISSB™ Standards;
- enhancing Sustainability Accounting Standards Board (SASB) standards; and
- focusing on new areas where guidance is most urgently needed. Current priority areas under consideration include biodiversity, ecosystems and ecosystem services (BEES) and human capital. Other proposed projects on human rights and integration in reporting will not begin in the next two years.

For more information about developments in this area, read our web article *What's next for the ISSB.*

Interoperability

Global companies are facing challenges of applying various jurisdictional reporting requirements. On May 2, 2024, the ISSB and EFRAG jointly published *Interoperability Guidance*, a detailed, bottom-up analysis of the climate-related disclosure requirements in IFRS S2 and corresponding requirements in ESRSs. The guidance provides:

- high level commentary on interoperability of some general principles of reporting (including presentation and materiality);
- a table showing corresponding climate-related disclosure requirements; and
- analysis notes on additional or different requirements between ISSB™ Standards and ESRSs.

The guidance is an important milestone that highlights significant synergies and allows companies to move forward with gathering data and preparing disclosures.

The ISSB is also working closely with Global Reporting Initiative (GRI) to support interoperability of ISSB™ Standards with GRI Standards. For more information about developments in this area, read our web article *Joint guidance on interoperability.*

Also, on May 2, 2024, CDP published its *2024 corporate questionnaire*. The questionnaire aligns with ISSB IFRS S2 climate standards. As a result, the questionnaire includes new and updated questions, along with guidance to help companies provide information in alignment with the ISSB standard. The reporting window opened on June 4, 2024 and the scoring deadline for disclosures will be on September 18, 2024.

To assist jurisdictions in adopting the ISSB™ Standards, ISSB released in May *the Inaugural Jurisdictional Guide.* This guide aims to provide transparency enabling investors and market participants to track jurisdictional progress towards comparable sustainability-related information. Together with this guide, the ISSB also launched a comprehensive *Regulatory Implementation Programme* to foster collaboration with global regulators and standard setters by providing practical tools and educational materials.

Refer also to our *Sustainability reporting resource centre* – which features a range of high-level visual overviews, video blogs, articles and analysis.

Canadian ESG reporting developments

Canadian Sustainability Standards Board developments

The CSSB was formed to develop and support the adoption of sustainability disclosure standards in Canada.

On March 13, 2024, the CSSB released exposure drafts of its first two proposed Canadian Sustainability Disclosure Standards (CSDS): Exposure Draft CSDS 1, which covers general disclosure requirements and Exposure Draft CSDS 2, which covers climate-specific disclosures.

These proposed standards are aligned with IFRS S1 and IFRS S2, with the exception of a Canadian-specific effective date and incremental transition relief.

The proposed incremental transition relief is as follows:

- Relief from disclosures about sustainability-related risks and opportunities beyond climate is extended for an additional year.
- Amendments to relief for disclosing comparative information to align with the relief noted above; and
- Relief from disclosure of Scope 3 emissions has been extended to two years (up from the one-year relief that exists in the IFRS® Sustainability Disclosure Standards).

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Importantly, the proposed standards would remain voluntary in Canada until regulators and/or legislators determine whether the CSDSs should be mandated. The proposed voluntary effective date is for annual reporting periods beginning on or after January 1, 2025, a one-year deferral from the effective date approved by the ISSB.

The comment period on the CSSB's proposals closed on June 10, 2024. The Board will take part in the consultation and ensure different perspectives from feedback received before finalizing the proposals.

Refer to our *CSSB - Sustainability reporting resource centre* – which features the latest updates specific to the Canadian reporting standards.

Canadian Securities Administrators (CSA) developments

In parallel with the CSSB's exposure drafts release, the CSA issued a statement noting that they will seek consultation on their revised climate-related disclosure rule following the finalization of CSDS 1 and 2. The CSA stated that they anticipate adopting only those provisions of the standards that are necessary to support climate-related disclosures.

The CSA issued their original proposed rule, proposed National Instrument 51-107 Disclosure of Climate-related Matters (NI 51-107) in October 2021. Since publication of the proposed climate-related disclosure rule, important international developments have occurred, including the SEC's finalization of their rule and the issuance of IFRS S1 and S2.

The CSA will consider these developments in addition to where the CSSB lands on its final standards prior to publishing its revised rule.

OSFI's Guideline B-15: Climate Risk Management

In March 2023, OSFI published Guideline B-15: Climate Risk Management, which sets out OSFI's expectations for the management of climate-related risks. Guideline B-15 will be effective for annual reporting periods beginning on or after January 1, 2024 for Domestic Systemically Important Banks (DSIBs) and Internationally Active Insurance Groups (IAIGs) headquartered in Canada. For all other in-scope Federally Regulated Financial Institutions (FRFIs), Guideline B-15 will become effective fiscal year-end 2025.

Subsequent to publishing Guideline B-15 in 2023, OSFI updated Guideline B-15 in March 2024 and introduced new Climate Risk Returns that will collect standardized climate-related data on emissions and exposures from FRFIs. OSFI will continue to review and amend Guideline B-15 as practices and standards evolve.

Legislation prohibiting "Greenwashing" (Bill C-59)

Bill C-59 received Royal Assent on June 20, 2024, making amendments to the Competition Act regarding environmental or social claims in marketing material. Bill C-59 applies broadly to environmental and social claims made in the public domain (e.g., in an ESG or Sustainability Report, website materials, social media, investor presentations, etc.) and requires that any claim is substantiated by an "adequate and proper test" (undefined in the Act) or in the case of a company or brand claim, by way of an "internationally recognized methodology" (also undefined in the Act). Penalties for non-compliance can range from up to $10 million, or three times the value of the benefit derived from the claim, or 3% of the company's global annual gross revenue, whichever is greater.

Fighting against forced labour and child labour

Bill S-211, Canada's new Act on fighting against forced labour and child labour took effect on January 1, 2024. Canadian and foreign businesses impacted by the Act are required to file a report on their efforts to prevent and reduce the risk of forced labour and child labour in their supply chain, by May 31st of each year.

New plastics reporting requirements

On April 20, 2024, the Government of Canada issued a section 46 notice to amend the Environmental Protection Act by creating a Federal Plastics Registry. The goal of the Registry is to collect information to support actions to prevent plastic pollution. This amendment will require companies to provide information about the lifecycle of plastics in Canada. Reporting requirements will be phased in starting with the 2024 calendar year information to be submitted in September 2025

US ESG reporting developments (including SEC activity)

On March 6, 2024, the SEC issued its final Climate Disclosure rule – *The Enhancement and Standardization of Climate-Related Disclosures for Investors* – initially proposed in March 2022. The final rule will generally apply to all U.S. SEC registrants, including Foreign Private Issuers but excluding Canadian issuers reporting under the MJDS.

Key changes from the proposed rule include:

- Scope 3: Eliminating Scope 3 disclosures for all registrants.

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

- Materiality: Using the standard materiality definition, with a specific disclosure threshold for the financial statement disclosures; The use of the 1% threshold has been significantly limited.
- Scopes 1 and 2: Limiting disclosure requirements to Large Accelerated Filers and Accelerated Filers and only when those emissions are material; Exempting Smaller Reporting Companies and Emerging Growth Companies.
- Compliance: Extending certain phase-in periods

Certain requirements of the final rule come into effect for Large Accelerated Filers beginning in calendar year 2025. Financial statement disclosures and most climate risk disclosures will be the first required disclosures; other disclosures, including GHG emissions, follow one year later and assurance on GHG emissions three years after that. Other filers trail by one to two years to the extent requirements apply.

Following numerous legal challenges filed after the release of the final rule, the SEC issued an order on April 4, 2024 staying its final rule pending the completion of judicial review. In its order issuing the stay, the SEC stated that it is not departing from its view that the climate rule is consistent with applicable law and within its long-standing authority to require the disclosure of information important to investors in making investment and voting decisions. In the subsequent court filing, the SEC stated it will address a new effective date for the climate rule when the stay is lifted.

Although the stay pauses the need for companies to calculate the effect of certain climate-related events or conditions on the financial statements, the remaining provisions of the rule are required for other reporting regimes (e.g., California laws and international standards).

Further, the US government has published Principles for Responsible Participation in Voluntary Carbon Markets (VCMs) to “inform and support ongoing efforts to address the challenges and opportunities associated with VCMs.” This is expected to shape the future development of regulation over the voluntary markets.

California laws

In October 2023, the California Governor signed two climate disclosure laws that will shape climate disclosure practices beyond the state’s borders. The laws will apply to US businesses (including US subsidiaries of non-US companies) that meet specified revenue thresholds and do business in California. Under the climate disclosure laws, certain businesses will be required to disclose scope 1, 2 and 3 GHG emissions, with limited assurance requirements from 2026 (on fiscal year 2025 data). The Governor also signed the California voluntary carbon market disclosures bill with the proposed amendments to be effective on January 1, 2025.

The California Air Resource Board is working through the operational details, including concerns raised by the Governor about implementation costs and timeline.

The California laws represent a new dimension, with state-level requirements that have national and international implications.

For further details on ESG developments in the US – refer to our *US Quarterly Outlook* publication.

European Union developments

Post issuance of the first set of ESRSs in July 2023, the implementation of ESRSs has progressed. However, the European Commission (EC) has delayed the adoption deadline for sector-specific standards and for adopting non-EU parent disclosure standards by two years to June 30, 2026.

There are potentially considerable ESG reporting implications for Canadian entities – as most EU-listed companies and large subsidiaries of Canadian companies with significant operations in the EU are in scope. Non-EU parent entities with substantial activities in the EU may also be in scope, with separate standards to be developed for these entities, with an effective date of 2028 reporting periods. The delay noted above has no impact on the 2028 effective date for non-EU parent reporting.

On May 31, 2024, EFRAG published new ESRS *implementation guidance* covering some of the more challenging aspects of ESRSs. It is non-authoritative guidance to support companies applying ESRSs, including performing a double materiality assessment and navigating the value chain requirements.

In addition to implementation guidance, EFRAG has launched the *ESRS Q&A Platform* – publishing answers to technical implementation questions submitted by preparers and other stakeholders. To date, EFRAG has published *a collection of 68 technical explanations* to questions across environment, social, governance and cross-cutting topics. Further batches will continue to be published by EFRAG.

As mentioned in the above section *ISSB developments,* the ISSB and EFRAG jointly published a detailed, bottom-up analysis of the climate-related disclosure requirements in IFRS S2 and corresponding requirements in ESRSs. See above for commentary on the analysis.

For more information about developments in this area, refer to our *web article* and *ESRS resource centre.*

Comparing sustainability reporting requirements

There is commonality among the EU requirements, ISSB requirements and the SEC requirements, including that the Task-force on Climate-related Financial Disclosures (TCFD) framework forms a shared input. However, there are also areas where they are not aligned, which may create practical challenges for companies trying to design coherent and consistent reporting that meets the needs of both global investors and jurisdictional requirements. In addition to points of detail, this includes the greater scope and scale of the ESRSs with their wider stakeholder focus.

Refer to our *guide* which compares the requirements and gives our insight on some of the practical challenges companies may encounter as they prepare for the new sustainability reporting standards.

Sustainability in the financial statements

Climate-related disclosures in the financial statements

All companies are facing climate-related risks and opportunities. Some are affected more than others. As the impact of climate change intensifies, investors and regulators are increasingly seeking greater transparency of climate-related information in financial statements.

Accounting Standards do not refer explicitly to climate-related risks or climate-related matters, but they implicitly require relevant disclosures in the financial statements when climate-related matters considered in preparing the financial statements are material. Therefore, companies are required to consider materiality carefully in deciding what information to provide about these matters. Information may be material even though there is no current-period financial impact.

In March 2023 the IASB added a narrow-scope maintenance *project* to its work plan to explore how companies can provide better information about climate-related risks in their financial statements. This project was initiated in response to feedback received on the IASB's most recent Agenda Consultation, and also builds on educational materials published by the IASB in 2020, and republished in *July 2023*. In September 2023, the IASB decided that the objective of the project is to explore whether and, if so, how targeted actions could improve the reporting of financial information about climate-related and other uncertainties in the financial statements. This project will continue to support the connectivity between the work of the ISSB and the IASB, and support the connectivity within general purpose financial reports.

The IASB met in April 2024 and tentatively decided to provide illustrative examples that would be included in the Accounting Standards to explain how to apply the requirements to report the impacts of climate-related and other uncertainties in companies' financial statements. The IASB aims to publish the exposure draft in July 2024.

For additional information about the potential financial statement impacts from climate-related risks, refer to our *web article*. For a more comprehensive discussion on potential impacts, including measurement and recognition impacts, see our *Climate change financial reporting resource centre.*

Net-zero commitments

Many companies are making 'net-zero' and similar climate-related commitments. Users of the financial statements, regulators and the public are raising questions about the financial reporting impacts of such commitments – in particular when do such commitments require the recognition of a liability?

When determining whether to recognize a liability, companies should consider the requirements in IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* (IAS 37). The requirements in IAS 37 lead to two tests that must be met before a liability can be recognized: (1) the company's public statement must create a constructive obligation (i.e., a valid expectation) and (2) the criteria to recognize a liability for the constructive obligation must be met. Importantly, a public statement does not automatically create a constructive obligation and thus may not lead to the recognition of a liability. The IFRS Interpretations Committee (the Committee) discussed the application of these two tests to a specific fact pattern. For more detail, see the discussion on the March 2024 decision by the Committee on climate related commitments including the two tests in the section *IFRS Interpretations Committee agenda decisions*.

The assessment may require significant judgment based on the specific facts and circumstances. Therefore, in order to provide a coherent, connected and integrated picture, companies are encouraged to review the following key considerations for actions:

- review their net-zero action plan;

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

- understand the financial reporting impacts of net-zero commitments, which often depend on the detail in the supporting action plan;
- tell a connected story through enhanced disclosures and explain which planned actions do and do not trigger a liability at the reporting date; and
- monitor standard-setting developments.

See our *web article, talkbook* and *podcast* for additional resources available.

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Major projects and new Accounting Standards

General presentation and disclosure

In April 2024, the IASB issued a new Accounting Standard, IFRS 18 *Presentation and Disclosure in Financial Statements*. IFRS 18 will replace IAS 1 *Presentation of Financial Statements*.

It is important to note that this new Accounting Standard does not add or change any recognition or measurement requirements - in other words, companies' net profit will not change. So what does this mean for companies' financial reporting? What will change is how they present their results on the face of the income statement and disclose information in the notes to the financial statements. In summary, there are three primary elements of IFRS 18 that will change the way companies present and disclose their financial performance:

- A more structured income statement:
  - It introduces two new formally defined and required subtotals on the face of the income statement – 'operating profit' and 'profit or loss before financing and income tax'. However, companies providing financing to customers as their ***only*** main business activity (e.g., banks) typically do not present the latter subtotal.
  - All companies are required to classify income and expenses into three new distinct categories based on a company's main business activities – operating, investing and financing. Categories for income tax expense and profit or loss from discontinued operations remain as separate categories.
  - Operating expenses are analyzed directly on the face of the income statement – classified either by nature, by function, or on a mixed basis. Any items presented by function require more detailed disclosures about their nature in the notes.
- Management-defined performance measures (or MPMs) are now disclosed and subject to audit:
  - MPMs are defined as a subtotal of income and expenses used in public communications outside of the financial statements that reflect management's view of the company's financial performance. As such, while there may be some overlap with a company's previous non-GAAP measures, MPMs and non-GAAP measures are not the same thing. For each MPM presented, companies will need to explain in a single note to the financial statements why the measure provides useful information, how it is calculated and reconcile it to an amount determined under the Accounting Standards.
- New guidance regarding when additional disaggregation is needed for items presented on the face of the primary financial statements or in the notes:
  - IFRS 18 includes enhanced guidance on how companies group information in the financial statements. IFRS 18 also mandates meaningful descriptions for line items. Therefore, companies are discouraged from labelling items as 'other'.

The new Accounting Standard is effective from January 1, 2027 and applies retrospectively. Early application is permitted.

Read our *web article* which provides an overview of the new Accounting Standard. You can also use *our high-level guide.* Our *First Impressions* publication provides our detailed insights and comprehensive analysis, with illustrative examples.

Reducing disclosures for subsidiaries

IFRS 19 *Subsidiaries without Public Accountability: Disclosures* was issued by the IASB in May 2024. It is a voluntary standard that applies to subsidiaries without public accountability, but whose parents prepare consolidated financial statements under the Accounting Standards.

For in-scope companies, IFRS 19 simplifies disclosures on various topics, including leases, exchange rates, income taxes, statement of cash flows, etc.

Although the effective date of IFRS 19 is January 1, 2027, the

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

application of the Accounting Standard is optional, even if a company is in the scope. Early adoption is also permitted. However, the effective date is caveated with some important comments:

- IFRS 19 is subject to adoption on a jurisdiction-by-jurisdiction basis, and at the time of publication of this document is not yet available for adoption in Canada (although the endorsement process is expected to be completed soon);
- The current version of IFRS 19 does not reflect any reduced disclosure requirements for any of the newer changes made to the Accounting Standards since February 28, 2021. The IASB is preparing to issue a "catch- up" exposure draft of proposed amendments in Q3 2024 for new or amended disclosure requirements added or amended in other Accounting Standards; and
- On the application of IFRS 19 in filings with the SEC, companies that may meet the IFRS 19 eligibility requirements also need to be aware of additional disclosures that may be required for financial statements that are intended for use by investors in the US public capital markets.

Read our *web article* which provides an overview of the new Accounting Standard including some FAQs.

Update on rate-regulated activities project

Some companies are subject to regulations that say how much and when they can charge their customers. Although some national accounting bodies provide specific guidance on accounting for the effects of rate regulation, Accounting Standards do not contain any equivalent comprehensive guidance. IFRS 14 *Regulatory Deferral Accounts* provides only temporary relief to first-time adopters of the Accounting Standards that are subject to rate regulation.

Companies use different accounting models to report the effects of this rate regulation. Some of these models reflect incomplete information about how rate regulation affects a company's underlying financial position, performance, and cash flows.

In January 2021, the IASB published its exposure draft *Regulatory Assets and Regulatory Liabilities*. The exposure draft proposes a new accounting model under which a company subject to rate regulation that meets the scope criteria would recognize regulatory assets and liabilities. This accounting model would align the total income recognized in a period under the Accounting Standards with the total allowed compensation the company is permitted to earn by the rate regulator, often reducing reported volatility in financial performance.

The key proposal in the exposure draft is that a company that is subject to rate regulation should report in its financial statements the total allowed compensation it is permitted to earn by the rate regulator for goods and services supplied in the period.

To achieve this, the exposure draft proposes an 'overlay' approach under which a company would, first, continue to apply the requirements of existing Accounting Standards – for example, to recognize and measure revenue from contracts with customers. Then, a company would recognize:

- a regulatory asset – when it has an enforceable present right to add an amount in determining the regulated rate to be charged to customers in future periods; and
- a regulatory liability – when it has an enforceable present obligation to deduct an amount in determining the regulated rate to be charged to customers in future periods.

Movements in regulatory assets and liabilities would give rise to regulatory income and expense. Broadly speaking, the total revenue recognized under existing Accounting Standards plus regulatory income minus regulatory expense under the proposed new Accounting Standard would align with the total allowed compensation determined by the rate regulator.

The company would present regulatory income minus regulatory expense separately in the statement of financial performance, immediately below revenue. Regulatory assets and liabilities would be presented separately from other assets and liabilities.

It is possible that some companies in the utility sector would not meet the scope criteria, whereas some outside the utility sector would be captured. A company will fall within the scope of the proposals if it meets the following conditions:

- the company is a party to a regulatory agreement;
- the regulatory agreement determines the regulated rate that the company can charge for goods or services supplied to its customers; and
- the regulated rate is determined in a such a way that some or all the total allowed compensation for goods or services supplied in one period is charged to customers in a different period.

The proposed standard provides some guidance for these conditions. If a company meets these criteria, then it would be

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

required to apply the accounting model in the exposure draft. Unlike the approach in IFRS 14, the new accounting model would not be optional.

Companies covered by the proposals who did not apply IFRS 14 would recognize new assets and liabilities, and new items of income and expense. The impact on financial performance will depend on the facts and circumstances of the company but common cases would include the following:

- If recognition of income under the Accounting Standards previously lagged total allowed compensation permitted by the regulator, then a company would see an increase in net assets on transition to the new standard.
- If a company previously experienced material short-term timing differences between recognition of income under the Accounting Standards and total allowed compensation permitted by the regulator, volatility in reported earnings would be reduced.

Companies that applied IFRS 14 would transition to the new requirements. There is no option to automatically carry forward existing IFRS 14 accounting.

The IASB received 128 comment letters on the exposure draft when the comment period closed in July 2021.

In December 2021, the IASB discussed a plan for redeliberation to address the feedback received in the comment letters. In accordance with the plan, aspects of the proposals were redeliberated throughout 2022, 2023 and into 2024.

Project updates in Q2 2024

The IASB continued to redeliberate the proposals in Q2 of 2024. The exposure draft and information about project updates are available on the IASB's *Rate-regulated Activities project page*.

The IASB made the following tentative decisions at the April 2024 meeting:

- Discounting of future cash flows – Minimum interest rate:
  - to retain the proposals that require a company's assessment on any indication that the regulatory interest rate for a regulatory asset might be inadequate to cover the time value of money and uncertainty in the future cash flows. Further, if the minimum interest rate is higher than the regulatory interest rate, the minimum interest rate should be used as the discount rate;
  - to clarify that companies are not required to calculate the minimum interest rate for the regulatory asset or conduct an exhaustive search for indications the regulatory interest rate is inadequate as described above;
  - to retain the proposal that requires a company to always use the regulatory interest rate as the discount rate for any regulatory liability;
  - to provide guidance on how to estimate the minimum interest rate, incorporating principles used in other Accounting Standards; and
  - to have an optional exemption that a company is not required to apply the minimum interest rate to a regulatory asset that arises from variances between estimated and actual costs/volume. If the exemption is applied, the company is required to disclose that fact and the carrying amount of regulatory assets at the end of the reporting period. The requirements to apply the minimum interest rate should be followed once the regulator determines the final balance to be included in future regulated rates.
- To exclude from the scope of the Accounting Standard regulatory assets and liabilities that might arise when regulated premiums charged in insurance contracts within the scope of IFRS 17.
- Amendments to IFRS 3 and IFRS 5:
  - to form an exception to the recognition and measurement principles in IFRS 3 for regulatory assets acquired and regulatory liabilities assumed; and
  - to exclude regulatory assets from the scope of IFRS 5.

The IASB met again in May 2024 and made the following tentative decisions regarding the interaction of the proposed guidance in the exposure draft:

- With IAS 12 *Income Taxes* :
  - the income tax consequences of recognizing a regulatory asset or regulatory liability may lead to a separate regulatory asset or regulatory liability; and
  - the tax base of a regulatory asset or regulatory liability should be determined by applying IAS 12.
- With the proposed amendments to IAS 8 and suggested amendments to other Accounting Standards:
  - to retain the proposal to delete the temporary exception (IAS 8.54G) that refers to the Framework for the Preparation and Presentation of Financial

Statements instead of the Conceptual Framework for Financial Reporting issued in 2018.

The IASB will continue to redeliberate the project proposals at future meetings.

Update on financial instruments projects

Financial instruments with characteristics of equity

IAS 32 *Financial Instruments: Presentation* sets out how an issuer distinguishes between a financial liability and equity and works well for many, simpler financial instruments. However, classifying more complex financial instruments under IAS 32 – e.g. those with characteristics of equity – can be more challenging, leading to diversity in practice.

In June 2019, the IASB released a discussion paper to respond to those challenges. After considering the feedback received on that discussion paper, the IASB has developed proposals meant to clarify and improve IAS 32's classification principles and requirements without undertaking an entire re-write of the Accounting Standard, and to add additional disclosure requirements to meet the requests of users.

The IASB issued its exposure draft in December 2023, which included proposals to address the following key areas:

- how to apply the 'fixed-for-fixed' condition;
- when to reclassify instruments between equity and financial liabilities;
- how to reflect contingent settlement provisions in the classification of a financial instrument;
- how to account for obligations to purchase 'own equity' instruments;
- whether and when laws or regulations affect the presentation of a financial instrument;
- what factors to consider in determining whether a shareholders' right to decide can be treated as that of the issuing company.

Some companies could see changes in the classification of their financial instruments under the proposals. The proposals are retrospective, with restatement of the most recent comparative period. Additional transition provisions are also included in the exposure draft. The exposure draft was open for comment until March 29, 2024 and the IASB discussed a summary of feedback received on the exposure draft at the May 2024 meeting. No decisions or updates were made in Q2 2024.

The exposure draft and project updates are available on the IASB's *Financial Instruments with Characteristics of Equity project page*. For additional information on this project, refer to our *web article*.

Dynamic risk management

Although IAS 39 *Financial Instruments: Recognition and Measurement* and IFRS 9 *Financial Instruments* provide models for macro hedge accounting, these contain restrictions that limit companies' ability to reflect some common dynamic risk management (DRM) activities in their accounting (i.e. when the risk position being hedged changes frequently and is hedged by an open portfolio of changing assets and liabilities). Moreover, some of these models deal specifically with interest rate risk management rather than other types of risk. Without an accounting model that reflects the broader use of dynamic risk management activities, some have asserted that it can be difficult to faithfully represent these activities in financial statements.

The IASB has explored and developed the key areas that are critical to an accounting model (DRM Model) which was tentatively decided to be developed based on cash flow hedge accounting mechanics. The DRM Model will allow investors to comprehend the impact of a company's DRM from changes in interest rate and to evaluate the effectiveness of such risk management.

To assess the viability and operability of the DRM Model, during 2020 the IASB carried out outreach with financial institutions (mainly banks) that manage interest rate risk using DRM strategies.

In 2021, the IASB received feedback on core elements that are central to the DRM Model and tentatively decided to make some refinements to address the following key areas for improvement in the DRM Model that were identified from the outreach:

- target profile;
- designation of expected cash flows and impact on imperfect alignment; and
- recognition of fair value changes in other comprehensive income.

The project was added to the standard-setting programme in May 2022, and the IASB is working toward publishing an exposure draft which is expected to be issued in the first half of 2025.

Project updates in Q2 2024

The IASB made the following tentative decisions at the June 2024 meeting:

- Requirements related to the capacity assessment:
  - to require companies to calculate the maximum future economic benefit of its current net open risk position as at the reporting date, using the present value of such position;
  - to require companies with a capacity shortfall in the DRM Model to account for the gradual reduction of the shortfall in upcoming periods, which can be done using either a straight-line basis or another systematic method over the risk management time horizon; and
  - to prohibit companies from reversing any capacity shortfalls previously recorded in profit or loss.
- Presentation requirements:
  - to present the gradual reduction of the shortfall recorded in the reporting period as a separate line item in the statement of profit or loss;
  - to present any misalignment recognized in the reporting period in conjunction with the net gains or losses from designated derivatives and the DRM adjustment, together with the fair value gains or losses from other derivatives; and
  - to present a net amount of the DRM adjustment as a separate line item in the statement of financial position as at the reporting date.

The IASB also discussed the potential disclosure requirements of the DRM Model.

The discussion paper and information about project updates are available on the IASB's *Dynamic Risk Management* *project page*.

At its future meeting, the IASB will continue its deliberations on the areas and topics identified in the project plan.

Other developments

Uncertain times – The impact of external events on interim financial statements

Many companies are likely to be facing challenges as a result of external events – e.g. natural disasters, geopolitical events, climate-related effects, or inflationary pressures – which may cause economic uncertainty.

Depending on the industry and the economic environment in which a company operates, external events could affect the recognition and measurement of companies' assets, liabilities, income, and expenses. Also, as a consequence of these events, companies may be facing going concern difficulties due to liquidity pressures.

IAS 34 *Interim Financial Reporting* generally requires that all events and transactions are recognised and measured as if the interim period were a discrete stand-alone period – i.e. there are generally no recognition or measurement exemptions for interim financial reporting.

Condensed interim financial statements (hereafter referred to as 'interim financial statements') typically focus on changes since the last annual financial statements. In times of economic uncertainty, preparing the interim financial statements is likely to involve more than the usual update since the last annual financial statements. Investors and other users may also expect information above and beyond what is typically disclosed.

Although many disclosures required by other Accounting Standards are not mandatory in interim financial statements, in uncertain circumstances companies may need to provide these disclosures to ensure that the interim financial statements provide relevant information to the users of those statements.

For more information, refer to our *web article*. Also refer to our financial reporting in uncertain times *resource centre* for more detailed guidance on a broad range of topics covering the financial reporting impacts of operating in changing environments, which is relevant to both annual and interim financial statements.

Business combinations – Disclosures, goodwill, and impairment

In response to investors requests for improved information on business combinations (as defined in the Accounting Standards) and concerns over the impairment tests under IAS 36 being costly and complex, in March 2024, the IASB issued its exposure draft *Business Combinations – Disclosures, Goodwill and Impairment*.

The proposed changes to IFRS 3 *Business Combinations* would:

- result in companies providing information to investors about the performance of an acquisition by requiring both quantitative and qualitative information about expected synergies – e.g. total revenue synergies – as well as information on the benefits expected start date and their duration.
- allow investors to directly assess the performance of acquisitions, rather than using goodwill impairment as a proxy indicator.

The proposals would also result in increased disclosures for 'strategic' business combinations including disclosure of specific acquisition-date key objectives and related targets and progress to meeting those targets in the acquisition year and subsequent periods.

While the proposals do not reintroduce an amortization model for goodwill, the proposed changes to the IAS 36 value-in-use testing requirements aim to simplify and clarify the impairment test.

The exposure draft is open for comment until July 15, 2024.

For more information, refer to our *web article*, and also refer to IASB's *Business Combinations—Disclosures, Goodwill and Impairment project page.*

Amendments to IFRS 9 and IFRS 7– Classification and measurement of financial instruments

The IASB has issued amendments to IFRS 9 and IFRS 7 in May 2024. These amendments related to classification of financial assets and accounting for settlement by electronic payments respond to feedback received from a post-implementation review (PIR) of the classification and measurement requirements in IFRS 9.

Amendments to IFRS 9 - Classification of financial assets

Over the past years, questions have arisen regarding how to classify some financial assets, especially on the application of the solely payments of principal and interest (SPPI) test. The amendments to IFRS 9 address the classification of the following financial assets:

- financial assets with contingent features such as ESG linked features;
- financial assets with non-recourse features; and
- contractually linked instruments (CLIs).

The amendments introduced additional disclosure requirements for the following:

- investments in equity instruments that are measured at fair value through other comprehensive income; and
- financial instruments with contingent features.

Classifying financial assets with an ESG-linked feature

The amendments clarify how a company would assess the solely payments of principal and interest (SPPI) condition for the contractual cash flows arising from a financial asset with contingent features.

The amendments address a specific call for clarification on whether contractual cash flows of some financial assets with an ESG-linked feature – e.g. a feature that adjusts the interest rate on an asset by a specified number of basis points depending on whether the borrower achieves a pre-determined ESG or sustainability-related target(s) – represent SPPI, which is a condition for measurement at amortized cost. The new amendments introduce an additional SPPI test which applies to all contingent features, not just ESG-linked features.

Under the amendments, financial assets with contingent features that are not directly related to a change in basic lending risks or costs (for example, where the cash flows change depending on whether the borrower meets an ESG target) could now meet the SPPI criteria, as long as the following conditions are met:

- The contractual cash flows, both before AND after the contingent event meet the SPPI criterion;
- The contractual cash flows are NOT significantly different from an identical financial asset without such a contingent feature.

Financial assets with non-recourse features

The amendments include clarifications on determining whether a financial asset is non-recourse such that it is primarily exposed to an underlying asset’s performance risk rather than the debtor’s credit risk. The amendments clarify the requirement to look through to the underlying assets or cashflows to determine whether the financial asset qualifies as SPPI by providing a list of factors to consider.

Classifying contractually linked instruments (CLI)

To address questions on applying the SPPI requirements to CLIs, the amendments clarify their key characteristics and how they differ from financial assets with non-recourse features.

Disclosures on investments in equity instruments

The amendments require additional disclosures for equity instruments that are measured at fair value and whose gains or losses are presented in other comprehensive income (FVOCI). Companies would be required to disclose the change in the fair value separately related to (1) investments derecognized during the reporting period and (2) investments held at the end of the reporting period.

There is no change to the measurement or presentation requirements for such investments in equity instruments.

Disclosures on financial instruments with contingent features

The amendments require companies to provide additional disclosures for all financial assets and financial liabilities that:

- have contingent features that are not directly related to a change in basic lending risks or costs; and
- are not measured at fair value through profit or loss.

For such financial instruments, companies should disclose:

- a qualitative description of the nature of the contingent event;
- quantitative information about the possible changes to contractual cash flows; and

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

- the gross carrying amount of financial assets and the amortized cost of financial liabilities are not measured at fair value through profit or loss.

Amendments to IFRS 9 - Accounting for electronic payments

The question on when to recognize or derecognize a trade receivable or payable when it is settled using an electronic payment system seems relatively simple on the surface. However, it has generated a significant amount of debate because there is diversity in practice for both the receivable and payable sides of the transaction.

Following the amendments to IFRS 9, companies that recognize or derecognize financial assets or financial liabilities on the payment initiation date could see a change to their accounting as a general requirement is added that really reiterate the following requirements:

- financial instruments are recognized when an entity becomes a party to a contract;
- a financial asset is derecognized when rights to the cash flows expire, or the asset is transferred; and
- a financial liability is derecognized when it is settled, which is the date on which the liability is extinguished.

However, the amendments allow an exception that would apply only for financial liabilities. The exception would allow a company to derecognize a financial liability before the settlement date, when it uses an electronic payment system and, after initiating the payment,

- it has no practical ability to withdraw, stop or cancel the payment instruction;
- it has no practical ability to access the cash to be used for settlement as a result of the payment instruction; and
- the settlement risk associated with the electronic payment system is insignificant.

Note that the exception does not apply to payments by cheques. Companies can choose to apply the exception for electronic payments on a system-by-system basis. Given the widespread use of electronic payment systems and the variety of terms, determining whether the exception criteria are met for each one may require significant time and effort. If the derecognition exception criteria are not met, determining the settlement date may also present challenges and companies may be required to change their existing systems and processes.

The amendments will be effective from January 1, 2026. Companies can early adopt all these amendments or can separately early adopt only the SPPI assessment and its related disclosures.

For more information, refer to our web articles – *classification of financial assets* and *accounting for electronic payments*.

Other potential amendments to IFRS 9 – Power purchase agreements

In July 2023, the IASB decided to undertake a project to clarify how companies apply the own-use exemption in IFRS 9 to physical Power Purchase Agreements (“PPA”). The objective is to determine whether narrow-scope amendments may be made to IFRS 9 to reflect the impact of PPAs in which the underlying item cannot be stored economically and is required to be consumed or sold within a short period of time (i.e., renewable electricity contracts). The IASB also noted that the same application questions were also raised for purchases of renewable energy through virtual PPAs.

Therefore, in May 2024, the IASB issued its exposure draft *Contracts for Renewable Electricity*, which proposes narrow-scope amendments to IFRS 9 to reflect the impact of Power Purchase Agreements (“PPA”).

With proposed amendments, the IASB focuses on the application of the own-use exemption for purchasers of physical PPAs and hedge accounting requirements using a PPA as a hedging instrument.

Application of the own-use exemption for purchasers of PPAs

To apply the own-use exemption to a physical PPA, IFRS 9 currently requires companies to assess whether the contract is for receipt of electricity in line with the company’s expected purchase or usage requirements. However, due to the unique characteristics of electricity (including the difficulty to store it) and its market structure, a purchasing company may not be able to use the electricity within a short period and the electricity may have to be sold back to the market.

The proposed amendments would allow a company to apply the own-use exemption to certain PPAs depending on:

- their purpose, design, and structure;

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

- the reasons for past and expected sales of unused electricity; and
- whether such sales are consistent with the company's expected purchase or usage requirements.

The proposals would require companies to apply the proposed amendments retrospectively (without requiring prior periods to be restated).

Hedge accounting requirements for purchasers and sellers of PPAs

Virtual PPAs and PPAs that do not meet the own-use exemption are accounted for as derivatives and measured at FVTPL. Applying hedge accounting could help companies to reduce profit or loss volatility by reflecting how these PPAs hedge the price of future electricity purchases or sales.

Buyers and sellers of PPAs face challenges when applying cash flow hedge accounting under IFRS 9 because of a mismatch between the fair value of the hedging instrument (PPA) and the hedged transaction, which could lead to the hedging relationship not qualifying for hedge accounting.

Subject to certain conditions, the proposals would permit companies to designate a variable nominal volume of forecasted sales or purchases of renewable electricity as the hedged transaction, rather than a fixed volume based on highly probable estimates. This would facilitate an economic offset between the hedging instrument and the hedged transaction, enabling companies to apply hedge accounting.

The proposals would apply prospectively but offer the option to re-designate – without discontinuation – existing cash flow hedging relationships during the first annual reporting period in which the proposals are applied.

The proposals would also result in increased disclosure requirements that would include the key terms and conditions of the contract (such as duration, pricing, maximum or minimum quantities and whether they include renewable energy certificates) and other information such as the net volume purchases, the average market price of electricity, the fair value of the contracts or the expected volume of electricity to be sold or purchased over the remaining duration.

The exposure draft is open for comment until August 7, 2024.

Refer to our *web article* and IASB's *Power Purchase Agreements project page* for more details.

Global minimum top-up tax under BEPS 2.0

Many countries have amended their local laws to introduce a global minimum top-up tax as part of the international tax reform. This reform includes a two-pillar solution.

- Pillar One aims to ensure a fairer distribution of profits and taxing rights among countries.
- Pillar Two aims to ensure that large multinational groups pay at least the minimum rate of 15 percent on income arising in each jurisdiction in which they operate. If the blended GloBE effective tax rate for all companies in a specific jurisdiction is below the 15 percent minimum rate, then they will be liable to pay a top-up tax for the difference.

In May 2023, the IASB issued amendments to IAS 12 which provide a temporary mandatory relief from deferred tax accounting for top-up tax: companies are effectively exempt from providing for and disclosing deferred tax related to top-up tax. However, they need to disclose that they have applied the relief. The amendments were effective immediately upon their release in 2023.

The rules and regulations surrounding the calculation of top-up tax and the mechanisms for collection are complex.

In our *web article,* the following key issues are summarized to help companies prepare their financial statements:

- *Disclosures*: To compensate for the potential loss of information resulting from the mandatory deferred tax accounting relief, companies are required to provide relevant disclosures in their financial statements from December 31, 2023 onwards.
- *Impairment assessment*: Companies may need to reflect the impact of upcoming changes in tax laws in their impairment assessments.

  Interim reporting: To determine how to reflect the current top-up tax and what information to disclose, companies need to consider the status of Pillar Two implementation in the countries where the group operates at the interim reporting date. This is because different countries are at different stages of implementing the legislation.
- *Recharges of Pillar Two taxes*: Companies within a group may enter into 'recharge arrangements' for Pillar Two taxes that are levied on one company, but triggered by another company. The Accounting Standards do not specifically address the accounting for these recharge arrangements in a company's separate financial

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

statements, and companies will need to develop an accounting policy, to be applied consistently.

Update on GloBE in Canada

On June 20, 2024, the legislation (Bill C-69) to enact the global minimum tax measures in Canada received royal assent. The legislation implements two key measures of the OECD's Pillar Two global minimum tax in Canada. These measures are the income inclusion rule as well as a domestic minimum top-up tax that is intended to be a qualified domestic minimum top-up tax as defined in the GloBE Model Rules. These rules will apply to fiscal years of qualifying multinational groups beginning on or after December 31, 2023 in line with the OECD's recommended timing.

For additional information on the administrative and legislative developments in jurisdictions around the world related to the implementation of Pillar Two please refer to *BEPS 2.0: state of play.*

Other legislative changes

On June 20, 2024, Bill C-59 also received Royal Assent. Bill C-59 also included a number of tax and legislative changes such as the share-buyback tax and clean technology tax credits. These changes could have an impact on a company's financial reporting or sustainability reporting (see the section on *Greenwashing legislation* above). For additional information, please see our *web article*.

IFRS Interpretations Committee agenda decisions

Companies applying Accounting Standards are required to reflect the explanatory material included in final agenda decisions made by the Committee. Bookmark our IFRIC agenda decisions *web page* to keep up to date with the latest discussions.

March 2024 final agenda decision

Climate-related commitments (IAS 37)

At its March 2024 meeting, the Committee voted to finalize its agenda decision on climate-related commitments about the circumstances in which a company recognizes a provision for the costs of fulfilling a commitment to reduce or offset its greenhouse gas emissions.

The Committee confirmed that the company would apply a two-part test under IAS 37:

- whether the company's statement has created a constructive obligation (i.e., a valid expectation); and
- whether the company recognizes a provision for its constructive obligation: the key to the criteria is identifying the past event (i.e., the company will recognize a provision only when it emits the pollutants in the future).

The IASB agreed to publish the agenda decision in its April 2024 meeting.

For more information, refer to our *podcast* and the *March 2024 IFRIC update*.

June 2024 final agenda decision

Disclosure of Revenues and Expenses for Reportable Segments (IFRS 8)

At its June 2024 meeting, the Committee voted to finalize its agenda decision (with some suggested changes) on the application of the requirements in paragraph 23 of IFRS 8 *Operating Segments* to disclose for each reportable segment specified amounts related to segment profit or loss.

The agenda decision focused on two key issues:

1. A requirement to disclose the specified amounts in paragraph 23 of IFRS 8 for each reportable segment if those amounts are:
   - included in the measure of segment profit or loss reviewed by the chief operating decision maker (CODM), even if they are not separately provided to or reviewed by the CODM; or
   - regularly provided to the CODM, even if they are not included in the measure of segment profit or loss.
2. A requirement in paragraph 23(f) of IFRS 8 to disclose 'material' items of income and expense disclosed in accordance with paragraph 97 of IAS 1 where a company:
   - applies paragraph 7 of IAS 1 and assesses whether an item of income and expense is material in the context of its financial statements as a whole;
   - considers both qualitative and quantitative factors; and
   - applies the requirements in paragraphs 30-31 of IAS 1 when considering how to aggregate information.

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

The agenda decision is expected to clarify that under IFRS 8, there is no requirement to disaggregate by each reporting segment every item of income and expense presented in its statement of profit of loss or disclosed in the notes.

The Committee concluded that the principles and requirements in the Accounting Standards provide an adequate basis for a company to apply the disclosure requirements in paragraph 23 of IFRS 8 and decided not to add a standard-setting project to the work plan. The IASB will consider this agenda decision at its July 2024 meeting.

For more information, refer to the *June 2024 IFRIC update.*

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Requirements effective in 2024

The below are new amendments to Accounting Standards effective for annual reporting periods beginning on or after January 1, 2024. The implementation and the effective dates of Sustainability Disclosure Standards are subject to local regulation and the latest information can be found in the section *sustainability disclosures*.

Classification of liabilities as Current or Non-Current (Amendments to IAS 1)

Under the amendments to IAS 1 the classification of certain liabilities as current or non-current may change (e.g. convertible debt). In addition, companies may need to provide new disclosures for liabilities subject to covenants.

A company will classify a liability as non-current if it has a right to defer settlement for at least 12 months after the reporting date. This right may be subject to a company complying with conditions (covenants) specified in a loan arrangement.

After reconsidering certain aspects of the 2020 amendments, the IASB reconfirmed that only covenants with which a company must comply on or before the reporting date affect the classification of a liability as current or non-current.

However, when non-current liabilities are subject to future covenants, companies will now need to disclose information to help users understand the risk that those liabilities could become repayable within 12 months after the reporting date.

The amendments also clarify how a company classifies a liability that can be settled in its own shares – e.g. convertible debt.

When a liability includes a counterparty conversion option that involves a transfer of the company's own equity instruments, the conversion option is recognised as either equity or a liability separately from the host liability under *IAS 32 Financial Instruments: Presentation*. The IASB has now clarified that when a company classifies the host liability as current or non-current, it can ignore only those conversion options that are recognised as equity.

The amendments apply retrospectively for annual reporting periods beginning on or after January 1, 2024, with early application permitted. They also specify the transition requirements for companies that may have early-adopted the previously issued but not yet effective 2020 amendments.

For more information about the amendments, refer to our *web article*.

Lease Liability in a Sale and Leaseback (Amendments to IFRS 16)

Amendments to IFRS 16 Leases impact how a seller-lessee accounts for variable lease payments that arise in a sale-and-leaseback transaction. The core requirement to include variable lease payments in a lease liability arising from a sale-and-leaseback transaction remains a significant departure from the general model in IFRS 16.

The amendments introduce a new accounting model for variable payments and will require seller-lessees to reassess and potentially restate sale-and-leaseback transactions entered into since 2019. IFRS 16 will now require a seller-lessee to estimate the variable lease payments it expects to make over the lease term to ensure that the initial gain or loss recognized relates only to the rights transferred to the buyer-lessor.

The amendments confirm the following:

- On initial recognition, the seller-lessee includes variable lease payments when it measures a lease liability arising from a sale-and-leaseback transaction.
- After initial recognition, the seller-lessee applies the general requirements for subsequent accounting of the lease liability such that it recognizes no gain or loss relating to the right of use it retains.

The seller-lessee would reduce the lease liability as if the 'lease payments' estimated at the date of the transaction had been paid. It would recognize any difference between those

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

lease payments and the amounts actually paid in profit or loss. It could determine the lease payments to be deducted from the lease liability in a number of ways – e.g. as 'expected lease payments' or as 'equal periodic payments' over the lease term.

The amendments are effective for annual reporting periods beginning on or after January 1, 2024, with retrospective application required dating from the initial application of IFRS 16.

For additional information, refer to our *web article*.

In addition, KPMG's Sale and leaseback *publication* also covers the new amendments to IFRS 16, with detailed worked examples showing how to account for sale-and-leaseback transactions that feature variable payments on initial recognition and subsequently.

Supplier Finance Arrangements (Amendments to IAS 7 and IFRS 7)

In response to investors' calls for more transparency of supplier finance arrangements' impacts on the financial statements, the IASB has amended IAS 7 and IFRS 7. The amendments introduce additional disclosure requirements for companies that enter into these arrangements. However, they do not address the classification and presentation of the related liabilities and cash flows.

The IASB's amendments apply to supplier finance arrangements, which have all of the following characteristics:

- a finance provider pays amounts a company (the buyer) owes its suppliers.
- a company agrees to pay under the terms and conditions of the arrangements on the same date or at a later date than its suppliers are paid.
- the company is provided with extended payment terms or suppliers benefit from early payment terms, compared with the related invoice payment due date.

The amendments do not apply to arrangements for financing receivables or inventory.

The amendments introduce two new disclosure objectives – one in IAS 7 and another in IFRS 7 – for a company to provide information about its supplier finance arrangements that would enable users (investors) to assess the effects of these arrangements on the company's liabilities and cash flows, and the company's exposure to liquidity risk.

Under the amendments, companies also need to disclose the type and effect of non-cash changes in the carrying amounts of the financial liabilities that are part of a supplier finance arrangement.

The amendments also add supplier finance arrangements as an example to the existing disclosure requirements in IFRS 7 on factors a company might consider when providing specific quantitative liquidity risk disclosures about its financial liabilities.

Companies need to collect additional information to meet the new disclosure requirements because some of the information may not always be readily available – i.e. the carrying amount of financial liabilities for which suppliers have already received payment from finance providers. Companies may need to obtain this information from their finance providers directly.

The IASB expects that finance providers will generally be able to make this information available, at least on an aggregated and anonymized basis – e.g. where restrictions may exist.

The amendments are effective for periods beginning on or after January 1, 2024, with early application permitted. However, some relief from providing certain information in the year of initial application is available.

For more information refer to our *web article*.
