

Prepare for Compliance: Navigating the Updated Georgian Law on Information Security

The updated law on Information Security introduces comprehensive obligations for critical information system entities, requiring them to conduct annual information security audits, effectively implement and maintain an Information Security Management System (ISMS), and, depending on specific criteria, pursue potential certification to ensure ongoing compliance and security management.

The **main goal** of this workshop is to review the relevant requirements for the business and offer practical guidance to the participants in terms of achieving and maintaining required compliance.

The format of the meeting is suitable for all those business stakeholders - **CEO's, CFO's, COO's, compliance officers, IT managers and/or information security specialists** - for whom these changes are relevant.
