

Internal Audit: Key thematic areas to consider in 2024

November 2023

Key thematic areas to consider in 2024: Overview

Internal Audit functions must remain agile when developing their 2024 audit plans as their organisations face evolving challenges.

The uncertainty and disruption that was seen across the global business landscape last year continues to intensify pressure on the risk and control environment. Most organisations continue to suffer supply chain uncertainties, impacts of inflation and geopolitical uncertainties.

To support Heads of Internal Audit, we have identified and compiled the key thematic areas and related risks which Internal Audit functions should

consider. The thematic areas below include both emerging and established risks which Internal Audit should consider when preparing its agile annual Internal Audit plan for 2024.

While the below is not an exhaustive list of thematic areas, these can serve as a starting point from which the Internal Audit function can leverage when assessing the organisation's risk profile and control environment throughout 2024. We have provided further information on each thematic area overleaf.

Key thematic areas to consider in 2024: External Pressures

Recent years have been described as the age of the 'polycrisis'.

The term coined by the World Economic Forum (WEF) describes the interaction between the COVID-19 pandemic, the war in Ukraine, as well as, the energy, cost-of-living and climate crises. The elevated levels of economic, geopolitical, and environmental uncertainty are creating new risks,

threats and opportunities at an unprecedented rate and impacting the Irish economy in many ways, including disruptions in supply chains, EU monetary policy adjustments and stakeholder expectations. This means that organisations' risk management processes and functions need to be more prognostic and dynamic than ever before in order to navigate these challenges. Below we have included the three main areas of focus:

Economic & Geopolitical Uncertainty

The global economy has been experiencing unprecedented levels of volatility in recent years, primarily driven by geopolitical issues. The ongoing wars in Ukraine and Gaza, as well as, fragmentation in trade regimes have all contributed to generating significant inflationary pressures. These events have maintained the higher prices of gas, oil and other commodities, which has resulted in sticky inflation and subsequent cost of living increases in 2023. In response, central banks in the EU, UK and US raised interest rates to their highest level in recent times. Whilst inflation is stabilising and forecast to drop as a result of the tightening monetary policy, macroeconomic challenges are expected to impact 2024. Organisations must persist in employing long-term strategies to effectively navigate the challenges and manage the risks.

The role of Internal Audit

Internal Audit need to consider how both the first and second lines of defence in their organisation are managing the increased risks and impact on operations associated with the geopolitical factors. Internal Audit should be involved in the evaluation of critical risk areas of the organisation. This should include the examination of the following aspects: long-term strategies aimed at mitigating financial and operational risks, third-party suppliers vulnerable to economic fluctuations, capital planning and management procedures.

Environmental, Social and Governance

ESG is now integral for long-term financial success. The introduction of the Corporate Sustainability Reporting Directive (CSRD) is the biggest transformation in corporate reporting of the last 25 years. It is requiring transformational changes in business activities so that organisations define and disclose their ESG goals and action plans and related metrics. However, an ESG risk and reporting program should not be implemented in isolation, organisations should recognise the value creation potential by connecting ESG efforts with long-term strategic goals, whereby committing to a bigger vision that encourages transformation to drive sustainability and resilience.

The role of Internal Audit

Internal Audit should review CSRD reporting in 2024 where the organisation is required to be compliant by 1 January 2024 and prepare a CSRD readiness assessment where the implementation date is later, by providing advice and assurance over the governance and control frameworks for non-financial reporting, as well as the review of processes for acquisition, aggregation, quantification and reporting of ESG metrics. Internal audit can also advise on broader risk management capabilities to align ESG risks, strategies, and organisational objectives to ESG initiatives, such as the UN Sustainability Goals and the European Green Deal.

Third-party relations & Supply Chain

The Covid-19 pandemic and the wars in Ukraine and Gaza have created volatile macroeconomic conditions and exerted great strain on global supply chains. Whilst the impacts of these events are easing, they along with other pressures such as extreme weather and inflation, highlight the need for robust risk management of outsourcing relationships, emphasising the imperative to diversify supplier portfolios and avoid undue dependence on a single source. In addition, given the evolving regulatory landscape and increasing stakeholder expectations, organisations are compelled to assess the transparency, ethics, and ESG implications inherent with their supply chains that support their operational activities. Consequently, many organisations have realigned their supply chain objectives from a focus on cost and efficiency to prioritising flexibility and continuity, we expect to see this continued focus on resilience and sustainability of supply chains.

The role of Internal Audit

Internal Audit should go beyond contract management and assess the maturity and resilience of supply chains, as well as providing advice on the suitability of the supply chain operating model and determine if sufficient consideration has been given to the risks associated with current macroeconomic and geopolitical conditions.

Key thematic areas to consider in 2024: Operational Challenges

Given the current business landscape, operational excellence is critical for success in 2024.

In light of the current external pressures, organisations must ensure that they are able to efficiently adapt, capitalise new opportunities and emerge stronger, regardless of the nature of the disruption. As previously discussed, external environmental factors highlight the importance of attaining and sustaining operational excellence in a

continuously evolving business landscape. The convergence of new technologies, the impact of the 'polycrisis', and shifts in employee and consumer expectations have created a dynamic environment necessitating agility and adaptability. This involves enhancing internal processes, minimising waste and optimising productivity. Attaining operational excellence will allow organisations to effectively respond to external challenges. Below we have outlined three main areas of focus:

Profitability, Inflation and Liquidity

In recent years, the world has experienced some of the most significant rises in inflation and interest rates since the early 2000s.

The macroeconomic volatility of 2023 has imposed substantial financial pressures on organisations, and these effects are expected to persist into 2024. This heightened risk to corporate assets and cash flows not only jeopardises long-term financial performance but also exacerbates the challenges posed by an already exceptionally uncertain operational and risk environment.

The role of Internal Audit

Organisations should pay particular attention to the additional pressure on their finance teams in light of the macroeconomic conditions. Internal Audit should perform reviews over investment/financing decisions, supply chain and procurement. Internal audit should evaluate how management are identifying, assessing and addressing inflation and interest rate risk, which should include some form of scenario analysis for adverse outcomes.

Operational Resilience

The existing economic, geopolitical, and environmental conditions have confronted organisations with a changing landscape, presenting new threats and opportunities. These developments have highlighted the importance of robust and resilient systems that are able to adapt and respond to disruption. Organisations are demonstrating an increased focus on resilience by investing in people, processes, data and technology. This shift in focus is crucial to ensure preparedness for disruption, to not only survive, but thrive through the challenges. Organisations must consider the risks associated with enterprise resilience, as well as maintaining a Disaster Recovery (DR), Business Continuity (BC) and Cyber Response (CR) Plans.

The role of Internal Audit

Internal Audit should assess the quality of the overall operational resilience and crisis management system, by ensuring that key threats have been identified and appropriate response plans (DR, BCP and CR) are in place, fit for purpose and whether emerging risks and evolving key threats are considered. Internal Audit should also ensure that organisations understand the impact of disruption, help determine what would be intolerable and the cost/benefit of mitigating/resilience measures.

Talent management and retention

Central to the success of any organisation is the ability to attract, retain, nurture, and efficiently deploy the right talent. Organisations are grappling with a number of challenges in this area including culture, hybrid working, talent acquisition and wellbeing.

To maintain competitiveness, HR leaders must remain well-informed about the latest trends in talent management. As we look ahead to 2024, these trends reveal a notable shift towards more employee-centric approaches such as employee experience, employee engagement, prioritising mental health, enhancing work-life balance, promoting positive career growth, and more.

The role of Internal Audit

Internal Audit should assess the organisation's approach to workforce planning and future skill demand, talent acquisition, and talent retention strategies. Internal Audit must understand the ramifications of employee departures and hiring freezes on the internal control landscape and how these factors may affect the organisation. Additionally, Internal Audit should evaluate how management oversees and plans to enhance the employee-centric factors.

Key thematic areas to consider in 2024: Technology

Technology is an integral part of the success of running an organisation.

Technology is constantly changing at a rapid pace and in 2023 we have seen an increase in the use of AI technology. Another major technological advancement in recent years is the integration of Cloud Computing which will continue to increase further in the future. The proliferation of digital business models and the growing dependence on

technology within organisations have given rise to the amounts of personal data being handled by organisations as part of their operations. This increases the risk of data privacy breaches and also increases the likelihood of cyber attacks.

Organisations need to implement robust IT security to mitigate these risks. Below we have outlined three main areas of focus:

Cyber Security

Cyber Security will remain a top focus for organisations in 2024, this is due to the ever-growing volume of sensitive data moving across interconnected and integrated networks and the increasing reliance on digital technology to operate efficiently.

We have continued to see a rise in cyber-attacks and data breaches in 2023 and these attacks can affect organisations of all sizes and industries. These attacks may result in high costs for organisations to fix the problem and repair the damage caused.

Organisations will need to implement robust IT security measures and increase awareness of cyber security risks to their workforce in order to resist the constant threat of cyber-attacks.

The role of Internal Audit

Internal Audit should assess the existing controls to mitigate cyber security risks and ensure the first and second line defence are continuously monitoring cyber security controls.

Data Privacy and Governance

Customers, employees and regulatory bodies have all become more aware of their data privacy rights concerning personal information and the measures taken by organisations to safeguard such data. This heightened awareness amplifies the potential risks faced by organisations, necessitating their commitment to compliance with regulation such as the General Data Protection Regulation (GDPR).

Failure on the part of an organisation to effectively manage and govern its data practices may result in reputational damage, and it could also lead to the imposition of financial penalties and sanctions.

The role of Internal Audit

Assess the Data Privacy and Protection controls in place in an organisation and ensure it is clear why the organisation has collected the data, where the data will be stored, is it secure, how long they plan on retaining this data and how it is disposed of in line with any regulation.

Ensure a comprehensive understanding of whether third parties have access to the organisation's data and, if so, how this access is monitored and controlled.

Digital disruption and emerging technology

As mentioned above there has been an increase in the use of AI technology. AI can be a major business enabler for an organisation through automating repetitive tasks and processing complex data. Nevertheless, it is essential for organisations to be aware of the accompanying risks and to proactively address them, particularly by focusing on the ethical deployment of these emerging technologies within the organisation.

Many organisations are now integrating Cloud Computing into the core strategies of their business. If used correctly with strong governance and management controls, it presents many benefits to organisations such as cost reductions and better collaboration within an organisation.

The role of Internal Audit

Internal Audit should assess the digital transformation strategy and can then provide advice on governance and control matters.

Understand how and why AI is being used by organisations and also what controls are in place to mitigate the risks that come with using AI.

Key thematic areas to consider in 2024: Regulatory Challenges

Regulatory Driven Risk

There is constant and complex regulatory change in areas such as technology, disruption, ESG and data privacy for organisations regardless of what industry they are operating in. The complexity and pace of these regulatory changes puts pressure on executive management, and they must adopt an agile approach to ensure compliance to new regulation.

The role of Internal Audit

In order to effectively evaluate an organisations compliance with regulation, the Internal Audit function must gain a comprehensive understanding of the existing regulatory landscape for the Industry the organisation currently operates in.
