How KPMG can help

There's ever more regulation coming your way. And the regulators are getting more stringent. You could face a hefty fine if you're not compliant, as well as significant damage to your reputation.

The bar is rising for your compliance team – whether it's meeting the requirements of internal controls, reporting on ESG, managing vendor ecosystems, or sector-specifc requirements like operational resilience in financial services.

That makes having an effective Governance, Risk and Compliance (GRC) system essential.

But today, many risk and compliance teams are having to get by with legacy tools. Often these aren't joined up across key domains, such as risk, compliance, legal and cyber. In some cases, GRC systems are no longer supported, leaving organisations with technology debt that they struggle to move on from.

Many of these tools also require a large degree of manual processing, with information held in Excel spreadsheets. They're hard to use and that means adoption may be patchy. Systems can become expensive to run, ineffcient and labour intensive and they don't provide access to timely reporting.

Today's modern platform-based technologies offer a solution. Many CROs are looking to replatform their GRC systems and reap the benefits of a more centralised, integrated and automated capability suite.

But this isn't a simple 'lift and shift' exercise from one toolset to another. It requires functional and technical preparation, and wider project planning.

We have vast experience helping businesses replatform their GRC capabilities. We've drawn on that to identify five practical considerations that will help you drive a successful GRC transformation.

Read on to discover more:

Benefts of a cloud-based, integrated GRC platform

- Increased productivity: integrated across the enterprise, with improved automation and agility.
- Improved scalability: ability to adapt to changing business needs and regulatory requirements, and take advantage of the latest technology.
- Reduced cost: consolidated systems mean lower support costs.
- ☐ Better user adoption: more intuitive and accessible systems are seen as a help, not a hindrance.

How KPMG can help

- Review how your processes work today. Where's collaboration working and not working? Be honest about what's good and what's not.
- Take time thinking about how you could do things better. What new ways of working do you want to introduce?
- Determine which systems integrations you need to keep. If you were designing again from scratch what systems approach would you take?
- Investigate the functionality cloud-based systems offer. Will this improve your approach? Does it make sense to keep some legacy systems - for cost or operational reasons - and what will this mean for functionality?
- Review your frameworks, policies, and risk content. Are your current frameworks and policies effective and is your risk content ready (see page

Why do change programmes fail to deliver the desired outcomes?

80% of the time it's because end users weren't engaged with the project and haven't bought into the vision. Organisations end up with technology that's either not aligned with what their people actually do; or they get great technology but their people don't use it.

The benefit story for your front-line

Are you spending a lot of your time filling out risk and compliance forms? Do you get frustrated when you get emails asking you for more information and clarification? Is it getting in the way of you doing what you enjoy?

Our new Governance, Risk and Compliance system automates the process. That means less form filling for you, and no more chaser emails.

It's got a user-friendly interface that guides you through what's needed from you and only asks you for content relevant to your part of the business.

- Involve your first-line users. Select representatives from your sales force, customer-facing staff, IT and finance teams. Their view is essential – after all, it's their use of your GRC tools that informs your second line of defence.
- Don't just involve people you think will say 'yes'. Get some people who
 are likely to be resistant to change so you can handle objections early on.
 They could turn out to be your strongest champions.
- Have personalisation and usability as one of your selection criteria. A
 successful GRC system is one that first-line users can access and use
 easily. That means implementing a tool that provides a personalised
 experience and offers functionality relevant to what they do.
- Tell a clear story on the benefits for your first line. Make sure key
 managers in your first-line functions understand what you are doing and
 why and, critically, how it will benefit them by reducing time and effort.
- Keep your people up to speed. Keep everyone aligned and informed on project progress and aims. As part of that, set out how you can move from GRC as purely a control and compliance mechanism to an enabler and value creator when it's integrated into a smart, joined up platform.

How KPMG can help

than adapt

- Remap processes to get the most from your smart system. Today's smart systems come with powerful functionality built-in - re-designed workflows, reporting, artificial intelligence and machine learning features. As a rule of thumb, embrace what's available out of the box: adopt not adapt.
- Think tomorrow, not today. Don't plan your system around what you need today. Think through how your business will change and grow. New platform services are designed to be scalable and grow in line with your business and as they are typically built with low-code software, they're easy to update without having to call in external IT consultancy resource.
- Identify where you can fine tune without compromising functionality. Of course, there is the ability to fine tune the platform to fit your specific business need - but keep customisation to a minimum. A good implementation partner may have accelerators that can provide even smarter functionality in rapid time.

How KPMG can help

Make sure your content is ready

Organisations often underestimate the importance of content migration when implementing a new GRC system.

But having the right content is critical – without good content you can't make good decisions. It's vital that you develop a content strategy alongside your GRC replatforming strategy.

- Identify the content you'll need. What content do you really need to enable
 you to run an effective GRC programme? Work out what connections you'll
 need between different content repositories. You need to identify the right
 content flow and how risks, controls, assets and policies should be mapped
 to your organisational hierarchy.
- Work out what content you have now, and where it is. Are you clear on what content you have today and how you can access it?
- Identify gaps in content. Once you've completed the first two steps, you'll
 have a view on where any gaps are. By isolating the points where content
 flows break down or are disconnected, you can implement solutions to join
 them up such as through APIs and connective content layers.
- Be clear on content retention policies. What content do you need to keep hold of?

How KPMG can help

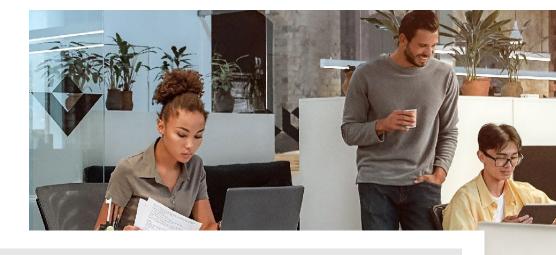

Take a phased approach

Transformation is a process over time, not a one-off event.

You don't need to have all the functionality of your new system turned on from day one. Taking a phased approach makes the project more manageable. It also means that you can gain the confidence and trust of the Board and management as you build credibility for the new system by demonstrating the benefits at each stage. In today's financially constrained environment that could prove key to securing budget.

- Have a clear vision. Have a vision of where you want to get and plot a step-by-step transformation to get there.
- Identify your minimally viable product. Identify your must have for go live and focus on delivering against them.
- Be ready to change direction. Review progress and reset you goals throughout your journey as your business objectives change, new regulations are released, and new technology becomes available.
- Plan with scale in mind. At each step ensure you aren't building in unnecessary complexity. You want a scalable solution that can flex and grow as required.

How KPMG can help

How we can help

KPMG offers expert guidance to help clients implement their GRC systems effectively. Leveraging our extensive experience and deep industry knowledge, we provide tailored solutions that align with your specific needs.

Our services include initial assessment, where we identify gaps and areas for improvement, and strategy development, to create a robust GRC framework. We assist in GRC technology selection, ensuring you choose a platform that fits your organisational requirements, and facilitate seamless integration with your existing systems.

Additionally, KPMG provides comprehensive training and support services, ensuring your team is well-equipped to manage and sustain your GRC framework successfully. Our ongoing support and continuous improvement programs ensure that your GRC system evolves with changing regulations and business needs, maintaining its effectiveness and relevance.

KPMG's approach is holistic, covering every aspect from risk assessment to regulatory compliance. We work closely with your team to understand your business objectives and regulatory environment, ensuring our solutions are not only compliant but also strategic enablers. Our proven methodologies and industry best practices guarantee a structured and efficient implementation process.

Furthermore, KPMG's global presence and extensive network provide you with access to the latest insights and trends in GRC, ensuring your system is forward-thinking and robust. With KPMG as your partner, you can confidently navigate the complexities of governance, risk management, and compliance, achieving sustainable success and operational excellence.
