

Summary

This chapter covers:

• Ind AS 115, Revenue from Contracts with Customers

Ind AS 115 lays down the principles to be followed for recognition, measurement, and disclosures in respect of revenue from contract with customers.

Key principles

Overview of the five-step model

Step 1: Identify the contract with customer

A contract is an agreement between two or more parties that creates enforceable rights and obligations. It may be written, oral or implied by customary business practices and meets all of the following criteria:

- It is legally enforceable
- It is approved and all the parties are committed to their obligations
- Rights to goods or services and payment terms can be identified
- Collection of consideration is considered probable

It has commercial substance i.e. the risk, timing or amount of the entity's future cash flows is expected to change as a result of the contract.

Step 2: Identify the performance obligations in the contract

- At contract inception, entities are required to identify as a performance obligation an implicit or an explicit promise to transfer to the customer a distinct good or service (or bundle of goods or services)
- A good or service that is promised to a customer is distinct if both the following criteria are met:
 - The good or service is capable of being distinct: Customers could benefit from the good or service on its own or with other readily available resources. Various factors may provide such evidence, such as when the good or service can be used, consumed, sold for an amount that is greater than scrap value or held in a way that generates economic benefits.
 - The promise to transfer the good or service is distinct within the context of the contract: The promise to transfer the good or service is separately identifiable from other promises in the contract.

Step 3: Determine the transaction price

Determination of transaction price is done by considering all amounts to which an entity expects to be entitled in exchange for transferring promised goods or services excluding amounts collected on behalf of third parties (for example, some sales taxes). Additionally, the consideration may include fixed amounts, variable amounts, or both.

Step 4: Allocating the transaction price to performance obligation

- The objective of allocating transaction price is for an entity to allocate transaction price to each performance obligation in an amount that depicts expected entitlement for transferring the promised goods or services
- The stand-alone selling price is the price at which an entity would sell a promised good or service separately to a customer. Entities should allocate the transaction price in proportion to the

stand-alone selling price of each distinct good or service (determined at contract inception). The stand-alone selling price is determined as below:

- Observable price: The best evidence of a stand-alone selling price is the observable price of a good or service when the entity sells that good or service separately in similar circumstances and to similar customers,
- Estimated price: If a stand-alone selling price is not directly observable, an entity should estimate it by considering all information available to the entity, maximise the use of observable inputs and apply estimation methods consistently in similar circumstances. Some of the estimation methods are:
 - > Adjusted market assessment approach
 - > Expected cost plus a margin approach
 - Residual approach (only in limited circumstances).

Step 5: Recognise revenue when (or as) the entity satisfies a performance obligation

- Revenue is required to be recognised when (i.e. at a point in time) or as (i.e. over a period of time) the entity satisfies a performance obligation by transferring the control of a promised good or service to the customer.
- A performance obligation is satisfied over time if either:
 - Customer simultaneously receives and consumes the benefits as the entity performs
 - Customer controls the asset as the entity creates or enhances it
 - The entity's performance does not create an asset with an alternative use and there is right to payment for performance to date.
- If a performance obligation is not satisfied over time, an entity satisfies the performance obligation at a point in time.
- Measurement of revenue is dependent upon the determination of the transaction price allocated to that performance obligation.

Other principles

Contract costs

- Incremental costs of obtaining a contract with a customer are recognised as an asset, if they are expected to be recovered
- Costs incurred to fulfil a contract are generally recognised as an expense, however, in certain cases, they may be recognised as an asset.

• Presentation

- When either party to a contract has performed, depending on the relationship between the entity's performance and the customer's payment, a contract asset or a contract liability is presented in the balance sheet
- Any unconditional rights to consideration are separately presented as a receivable.

Disclosures

 The objective of the revenue disclosures is to enable users to understand the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers.

Guidance from ITFG clarifications

Timing of revenue recognition

Ind AS 115 provides a control-based approach to be applied to all transactions at the contract inception. An entity needs to evaluate whether it transfers control of the good or service over-time or at a point in time for the purposes of recognising revenue.

Revenue is recognised...

Ind AS 115 provides that revenue is recognised overtime when any of the following criteria are met:

- a. Customer simultaneously receives and consumes the benefits provided as the entity performs
- b. Entity's performance creates or enhances an asset that the customer controls
- c. Entity's performance does not create an asset with an alternative use to it and it has an enforceable right to payment for performance completed to date.

Significant differences from IFRS¹

- IFRS 15, Revenue from Contracts with
 Customers provides that all types of penalties
 which may be levied in the performance of a
 contract should be considered in the nature of
 variable consideration for recognising revenue.
 Ind AS 115 excludes penalties from the list of
 variable consideration. Ind AS 115 has been
 amended to provide that penalties are required
 to be accounted for as per the substance of
 the contract. Where the penalty is inherent in
 determination of transaction price, it would
 form part of variable consideration, otherwise
 the same would not be considered for
 determining the consideration.
- Ind AS 115 requires an entity to present separately the amount of excise duty included in the revenue recognised in the statement of profit and loss. There is no such requirement in IFRS 15.
- Additional disclosures as compared to IFRS
 15 are prescribed. An entity is required to
 present reconciliation of the amount of revenue
 recognised in the statement of profit and loss
 with the contracted price showing separately
 each of the adjustments made to the contract
 price specifying the nature and amount of each
 such adjustment separately.
- Additional guidance has been given in Ind AS 115 to explain the accounting treatment in case of transfers of control of a product to a customer with an unconditional right of return.

Indian Accounting Standards (Ind AS): An overview (Revised 2019) issued by ICAI.

If none of the above criteria are met, then control of the good or service transfers at a point in time.

In the above context, ITFG considered an issue relating to a shipping entity involved in transportation of petroleum products from one port to other.

The contracts with customers state that the contract would not be terminated once the entity takes delivery of goods from the customers at the port and sails to the designated port of destination. The following issues in respect of performance obligations under the contract were considered by the ITFG:

- i. Whether the performance obligation under the above contract is satisfied over time or at a point in time
- ii. In case the performance obligation under the above contract is satisfied over time, whether the extent of satisfaction of performance obligation could be measured on the basis of number of days the vessel has sailed.

Whether the performance obligation is satisfied over time or at a point in time

ITFG clarified that in the given case, the entity would need to evaluate its performance obligation to determine if it satisfies any of the requisite criterion.

For evaluating criteria (a), in the given case an entity may not be able to readily identify whether a customer simultaneously receives and consumes the benefits from its performance. The entity is required to evaluate whether another entity would need to substantially re-perform the work carried out by the entity to date. If that work would not need to be substantially re-performed, then revenue would be recognised over time.

Considering the nature of performance obligation of the entity, it would not be meeting criterion (b) as it would not be able to create or enhance an asset that the customer controls as the asset is created or enhanced.

In the given case, for evaluation of criterion (c), an entity should consider whether the performance obligation creates an alternative use to it. Additionally, in determining whether it has an enforceable right to payment for performance completed to date requires consideration of the detailed requirements and guidance provided in Ind AS 115.

Measurement of progress towards complete satisfaction of a performance obligation

Ind AS 115 specifies the following two types of methods for measuring progress based on the nature of the goods or services that the entity promised to transfer to the customer:

- Input method
- · Output method.

Further, ITFG clarified that basis the above evaluation of criteria, if entity concludes that the performance obligation of the entity under its contract with a customer is satisfied over time, then the entity is required to determine an appropriate method of measuring progress on the basis of the relevant requirements and guidance contained in Ind AS 115. (ITFG 19, Issue 2)

First-time adopter of Ind AS transitional options under Ind AS 115

For existing Ind AS users Ind AS 115 provides two methods of accounting for transition - the retrospective method (with or without one or more of four practical expedients) and the cumulative effect method (simplified transition method).

In a situation where an entity (ABC Ltd.) complying with Ind AS for the first time from 1 April 2018 is required to comply with Ind AS 115, ITFG clarified that a first-time adopter does not have the choice of applying the simplified transition method.

Please refer to the Chapter 9, First-time adoption of Indian Accounting Standards for more details on the above issue (ITFG 19, Issue 3)

Accounting treatment of deferred tax adjustments recognised in equity on firsttime adoption of Ind AS in accordance with Ind AS 101, First-time adoption of Indian Accounting Standards at the time of transition to Ind AS 115/116, Leases

Please refer to the chapter 9, First-time adoption of Ind AS for more details on the above issue (ITFG 23, Issue 2)

Applicability of Ind AS 115 to distribution of gifts

Revenue is accounted for in accordance with Ind AS 115, only in case the counterparty to the contract is a customer. Further, a contract should create enforceable rights and obligations.

In case the conditions regarding a legally enforceable 'contract' and 'customer' are not met, the transaction would not fall within the scope of Ind AS 115.

Please refer to the chapter 4, Tangible and intangible assets for more details on the above issue (ITFG 22, Issue 4)

Expected Credit Loss (ECL) on the amount due in the course of business from government

Please refer to the chapter 3, Financial instruments for more details on the above issue (EAC opinion published in the October 2018 edition of the Journal 'The Chartered Accountant)
