

KPMG Learning Academy

Delivering comprehensive e-Learning modules that will make you future-ready

One of the impacts of the Coronavirus pandemic has been the need for social distancing and this 'New Normal' has now given e-Learning a fresh new perspective.

People learn and absorb information in different ways and at different speeds: e-Learning modules provide a flexible and versatile learning system that enable individual learners and organisations alike to tailor their training to fit with their specific circumstances.

Top 4 benefits of e-Learning are:

Cost Effectiveness

Reduction on the costs for traditional/physical training needs such as travelling, accommodation and rental.

Flexibility

Target audience would be able to take an e-Learning module in their own time, location and pace.

Consistency

Every learner would be on an equal footing. All learning information including course and content material would be shared at the same time and via the same medium.

Managing Updates

Easy access to updated content as and when they are made available.

KPMG's e-Learning modules are created by our Advisory subject-matter experts (SMEs) and are customisable to our client's expectations and requirements. These modular contents should be effectively placed within the organisation's learning platform to be deployed throughout the workforce when required.

Compliance

A series of robust compliance training modules could be the key difference between an organisation that successfully navigates risks, and one that becomes a cautionary tale. These modules help to protect an organisation's values and commitment to the law.

9 modules

Cyber Security Awareness Learning Path

Through these cyber security awareness training modules, an organisation's security policies, procedures, and best practices will be instilled within all employees.

14 modules

Sustainability

This module is an introduction to the broad field of sustainability. Key principles of sustainability will be covered along with emerging topics regarding human health and pollution.

2 modules
