## Leveraging KPMG's Connected Enterprise for Health to solve Complex Issues in Patient Flow

## Designing a Sustainable Healthcare Ecosystem

KPMG's Connected Enterprise for Health approach is designed to help organizations assess their current capabilities, identify gaps, and manage transformation hurdles across not only their enterprise, but also their community's healthcare landscape.

This approach can deliver the tools, methods and frameworks to help healthcare organizations design and embrace future business models that better connect communities for a more connected, integrated, and efficient healthcare ecosystem.

#### **Speakers**

Kenny O'Neil – Partner KPMG

KPMG's US Healthcare Leader for Connected Enterprise for Health

### Todd Whitacre – Director KPMG

Global Healthcare Connected Enterprise for Health Leader

#### **Description**

The complexities of discharge planning and transitions of care demand a multifaceted and integrated approach to overhaul how healthcare systems manage patient journeys. KPMG's Connected Enterprise for Healthcare helps organizations on their digital transformation journey unlock meaningful value for their patients, workforce, and communities. Our showcase focuses on a critical part of patient flow: discharge from acute care settings.

#### **Showcases:**

- **Transitions of Care** KPMG thinking on how to orchestrate patient flow and transitions across the ecosystem of care
- Foundational Solution Components aligning essential capabilities across the enterprise to improve discharge planning: from Governance, through to Technology Enablement, Innovation and Cultural Change
- Global Experience Engage with our leaders who are helping drive transformation in complex health systems in some of the largest Countries across the globe.
