

KPMG in collaboration with Microsoft organizes a healthcare data transformation showcase about the latest data trends

Healthcare data transformation

The right care at the right place requires healthcare information in the right place. Connecting systems and unlocking and harnessing available data for good, personalized care for the patient. In the Netherlands, this is complicated because not only is healthcare itself highly fragmented, but so is the data infrastructure.

Microsoft and KPMG have been working together globally for a long time to make the latest state-of-the-art technologies, such as AI and regional data platforms, available to healthcare providers in order to improve patient information, care delivery and patient outcomes.

Speakers

Hylke Kingma – Partner KPMG

Leads KPMG's Dutch digital health and health technology practice

Joost Huiskens
CMIO Microsoft NL

Description

Patient data has long been a major challenge for healthcare providers worldwide, from accurate input to proper storage and from exchange to utilization. The latest data trends, such as Cloud, AI, and data platforms, enable healthcare providers and funders to derive more value data and initiate the healthcare transformation. During the showcases, KPMG and Microsoft will discuss the latest use cases used in the Dutch market around (patient) data

Showcases:

- **(EHR) Cloud transformation:** Worldwide care providers are moving EHR and data systems to the cloud, in the showcase the latest and greatest possibilities will be shown
- **Data accessibility through platforms:** Platforms have proven to be a very effective way tool to support new healthcare delivery models that require close collaboration between regional healthcare organizations and the patient and/or citizen
- **Data with AI:** Using AI in healthcare transformation execution is key with deep industry knowledge and state-of-the art technology has proven to accelerate the transformations
