Accelerate application modernization with GenAI + Low-code

The rising impact of technical debt due to legacy applications

As businesses embrace digital transformation and evolve to meet market demand, they are often slowed down or hindered by legacy applications and overwhelming technical debt.

• 70% of IT leaders view technical debt as a major problem
• 92% of businesses are trying to fix it
• 28% of businesses don't even know where to start

High cost, long timelines, and unpredictability make modernization too risky to take on for many organizations. As a result, most modernization projects never get addressed. There has to be a better way!

## Transform legacy apps to modern in just hours

The rise of low-code, modern application development and generative AI makes it easier than ever to tackle these modernization challenges. Together, KPMG, OutSystems, and Rhino.ai have designed a starter solution to help demonstrate the power of low-code + GenAI technologies to modernizing legacy applications to OutSystems, the enterprise-grade low-code platform for the complex, business-critical apps that matter most to your business.

• Modernize legacy systems fast, reducing costs and complexity, through AI-assisted development
• Low risk, AI-driven solutions that won't disrupt your clients' current processes and can scale on any timeline
• Deliver immediate business value and highlight practical GenAI use cases without dedicating expensive resources or hard to find talent

Save up to 50% time and cost through GenAI + Low-code

The initial starter pack supports migration from Lotus Notes and Domino to OutSystems leveraging Rhino.ai. This cost effective bundle offering includes services and software to enable a pilot migration and business use case. Easily migrate off Lotus Notes and Domino and build exactly what businesses want and they can afford.

The team from KPMG will help you to navigate the development with confidence leveraging the GenAI delivery approach. Rhino.ai will analyze your process, logs, code, and documents through automation with experts in the loop. Migration to OutSystems' low-code platform will allow you to start replacing any aging workflow, approval or planning apps with engaging web and mobile experiences without the time, complexity and expense of traditional development tools and processes

Try our risk-free bundle to accelerate your app modernization projects:
