

The app that checks the VAT number of all your customers and suppliers in one click

It is very likely that at some stage, your economic activity has been hampered because of the technical restrictions of the Romanian tax authorities' IT system.

To support your employees in the financial department who want to speed up the process of verifying the VAT registration numbers of all business partners on the tax authorities' websites, (a process which up to now we assume has been carried out manually, one-by-one) or those who want to prevent situations in which tax inspectors reject the deductibility of significant amounts of expenses

and, more specifically, VAT related to these acquisitions, due to administrative errors (creating interest and penalties), we bring to your attention an application which is very useful and easy to use.

This application integrates **in real time** the databases of the Ministry of Finance, the National Fiscal Administration Agency, the Trade Register Office and VIES and generates the history of the VAT registration number or tax identification number you are interested in. All with a single click, in a few seconds.

In this application these codes will no longer be introduced manually. They can be imported not only from an Excel file but also from an ERP program.

Contact

If you are interested in this solution, please do not hesitate to contact us, so we can provide more details about the program, a demo and the fees. Note that a contract for this solution will be signed with our partner with whom we have developed this application.
