Introduction

In today’s fast-paced and rapidly changing environment, the financial services industry is challenged to find innovative ways to reach strategic growth objectives, further reduce compliance cost, and ensure effective management of regulatory change. As the industry transitions from eight years spent focusing on cost containment, remediation, and new regulations in a low interest rate environment, firms are now putting greater emphasis on their growth agenda. This includes acquisitions, new product development, cross-selling products and services, and improving customer service, which have all re-emerged under a digital technology lens as the industry’s highest priority. Regulators and central banks are also seeking ways to leverage new technologies to meet public policy objectives and complex supervisory requirements. For many organizations, leveraging technology is the answer.

While Financial Technology (FinTech) has become a core focus for all financial services players over the past decade and many banks have established their own labs, formed partnerships, and taken FinTech companies into residence programs, the focus is now zooming in on Regulatory Technology (RegTech) solutions. Why is that so?

**RegTech brings benefits to the financial services industry**

With industry-wide compliance cost ballooning to an estimated $70 billion annually in the United States alone, RegTech solutions have proven to be the accelerator that helps firms respond to increased regulatory expectations while reducing compliance cost, increasing enterprise-wide coordination, and making firms’ business strategies more agile.

**Greater Strategic Advantage**

- from better customer experience, new product development, real-time compliance, and agility

**Harmonized Coordination**

- through improved functioning across the three lines of defense and enterprise-wide data management as well as embedded ownership of risk management and compliance processes and controls into the first business line

**Reduced Cost**

- by cutting compliance expense an estimated 30 to 60 percent due to streamlined and simplified operations and reduced headcount spend

RegTech solutions provide the ideal platform for supporting the industry’s strategic growth agenda, accelerating their speed to market, and optimizing business processes while meeting regulatory standards. These solutions provide a way to first connect business processes with the labyrinth of complex regulatory obligations and then streamline and simplify these mandates into manageable processes that firms can implement effectively and relatively quickly. This will allow firms to deliver enhanced control over their enterprises’ activities, which, when combined with an appropriate risk culture, ultimately culminates in better protection from reputational damage and improved enterprise risk governance. Additionally, these solutions use the power of automation to reduce headcount spend and other compliance-related cost. For instance, compliance can be improved by limiting manual intervention and taking advantage of non-biased technology to accomplish certain fundamental processes.

Eighty-five percent of CEOs recognize the importance of integrating automated business processes with artificial intelligence and cognitive processes.

(Source: KPMG International’s 2016 Global CEO Outlook Study)
Eighty-five percent of CEOs recognize the importance of integrating automated business solutions. Why is that so?

The nexus between regulation and technology innovation has become a core focus for all organizations, leveraging technology is necessary to meet regulatory expectations while reducing compliance cost, increasing regulatory efficiency, and improving customer service. This includes acquisitions, partnerships, and establishing in-house labs for research and development. The financial services industry is challenged by a changing environment, the financial supervisory requirements have all re-emerged under a digital agenda. This includes acquisitions, partnerships, and taken FinTech to the next level. However, firms are now putting more emphasis on their growth strategies, further strategic growth objectives, and relative to streamlined and effective management of regulatory standards. These solutions use the power of automation to reduce headcount spend and other compliance costs. The answer is to find innovative ways to reach strategic growth objectives, further reducing compliance costs, and ensuring greater emphasis on their growth strategies.

For many public policy objectives and complex defense and enterprise-wide data management as well as risk governance. Additionally, these solutions help firms respond to increased supervisory requirements. For many public policy objectives and complex regulatory obligations and business processes with the labyrinth of compliance. These solutions use the power of automation to reduce headcount spend and other compliance costs.

The drivers behind RegTech solutions

Exponential growth in regulatory requirements over the last eight years, including a renewed consumer protection agenda and a demand for faster remediation of supervisory issues, has added to the cost of operationalizing compliance across the three lines of defense of enterprise risk management and resulted in increased resource spend. For instance, firms have invested heavily on the business side to develop consistent methodologies, enhance data lineage, and implement risk identification. The industry’s approach to compliance has amplified the need for end-to-end tools and platforms capable of automating and integrating front-to-back operations with compliance requirements that will ultimately drive accountability into the first line.

As firms continue to make technological advancements that enhance customer experience and increase convenience, the industry is looking for practical and more effective ways to take advantage of “big data”— customer, risk, financial, operational, and more — that holds the potential to address many of these compliance concerns. However, managing these data efficiently, manipulating it effectively to serve a variety of purposes, and ensuring it is protected from cyber-attacks and of sufficient quality to yield actionable results remains elusive. Human biases and other limitations in managing big data’s multiple sources, volume, and complexity, while unavoidable, have only served to exacerbate these concerns. Although significant cost and effort has been expended, many firms still find themselves in noncompliance with regulatory obligations which has led to substantial fines and considerable reputational damage.

RegTech solutions assist firms in moving away from the concept of big data towards one of “smart data.” Smart data uses machine learning and intelligent algorithms to make sense of big data’s overwhelming volume and complex patterns by structuring these patterns in a cost-effective way that is better able to identify current and emerging risks, predict compliance failures, and enhance business line coordination. Amidst significant business model disruption from increased competition and the rapid pivot toward growth objectives, it is critical that many of the manual processes firms’ have relied
Leveraging RegTech solutions: where do you go from here?

Determining where you want to be and what it will ultimately cost to get there is fundamental to the success of any firm. To take advantage of the many benefits of implementing RegTech solutions and realize their hidden value as a core component of business processes and controls, firms should consider the following:

— Initiate proactive discussions with regulators to foster engagement and explain innovations in process improvements and product and service development at the outset.

— Assess existing and emerging technologies within the firm to determine functionality and critical interdependencies across the three lines of defense.

— Determine strategic linkages and options for implementing effective RegTech solutions, including deciding whether to build, buy, or team with RegTech and FinTech providers.

— Take advantage of the ability of a given RegTech solution to be implemented quickly and relatively easily end-to-end or at multiple points in the value chain of an enterprise to target specific bits of complexity.

Perhaps just as critically, firms will also need to consider the unintended risks that are always embedded in any transformative solutions. As firms adopt these advances, they must continue to address potential risks, such as algorithmic biases and insufficiently robust data- and cyber-security measures, as well as risks associated with ongoing validation and change processes. Firms will need to embed their risk and compliance frameworks upfront in the design phase of their RegTech initiatives and then revisit its effectiveness continuously throughout the lifecycle of their programs.

Eighty-four percent of CEOs are concerned about the quality of the data they base their decisions on.

Leveraging emerging technologies to address challenges facing financial institutions

Forward-looking institutions are looking at the end-to-end regulatory compliance ecosystem and how best to automate disparate processes and controls to realize greater strategic advantage. Institutions are also marrying technology and regulatory requirements to address issues more efficiently and respond more rapidly to changing customer preferences and supervisory mandates.
The business benefits of enabling technologies

Regulatory automation tools are at the forefront of addressing many of the most pressing challenges facing financial institutions. As compliance, including conduct and reputational risk, remains on the agenda of regulators across the globe, RegTech solutions are also helping firms to better identify, monitor, and mitigate behavioral risks through the use of smart data, cognitive machine learning, and natural language and robotics processing for the benefit of customers. For instance, these solutions can assist firms with new account growth that does not lead to credit quality concerns, violate U.S. Bank Secrecy Act/Anti-Money Laundering (BSA/AML) compliance program requirements, or incur reputational damage to the firm. Additionally, as firms enhance their cyber strategies, these solutions can improve resiliency by reducing dependency on low-cost outsourced providers who often have inconsistent security standards and other vulnerabilities that are not readily controlled.

Significant benefits to the business can also be realized with the implementation of RegTech solutions that are automating regulation in ways that support and foster firms’ business and growth strategies. For example, big/smart data technologies can be used to efficiently process large volumes of structured and unstructured data from both proprietary systems and the Internet of Things’ vast external sources. Relevant data from multiple sources can be leveraged for better customer and counterparty credit analysis and underwriting of small business loans. Firms can leverage digital labor solutions to onshore certain functions and reinvent their labor strategies across their enterprises, potentially reducing cost and mitigating sourcing risk. For example, global firms impacted by the United Kingdom’s June 24, 2016, Brexit vote, could consider digital labor solutions to provide some relief to more restrictive passporting rights that are projected to further reduce the available pool of information and communications technology (ICT) professionals. Similarly, in the United States, firms might potentially incorporate these solutions to rapidly implement relevant components of the new administration’s proposed corporate income tax reform.

Ultimately, if implemented correctly, RegTech solutions will lead to reduced errors, improved compliance, and enhanced financial crime detection and fraud surveillance. They will also work in concert to deliver enhanced digital experiences for customers and significant cost optimization and efficiency opportunities by reducing manual processes and human biases. While not eliminating human capital spend entirely, firms can nevertheless focus redeploying fewer, highly-skilled compliance resources away from routine processes and towards analyzing output and applying critical judgment to this machine reporting.

1 See the 2016 EU Digital Scorecard, which states that “demand for skilled ICT professionals within the [United Kingdom’s] economy is rising rapidly, while the supply is not keeping pace.”
See the readily controlled vulnerabilities that are not security standards and other providers who often have inconsistent dependency on low-cost outsourced cyber strategies, these solutions reputational damage to the firm. program requirements, or incur Laundering (BSA/AML) compliance U.S. Bank Secrecy Act/Anti-Money to credit quality concerns, violate account growth that does not lead of customers. For instance, these robotics processing for the benefit better identify, monitor, and mitigate solutions are also helping firms to regulators across the globe, RegTech financial institutions. As compliance, the most pressing challenges facing the forefront of addressing many of

*The nexus between regulation and technology innovation*
Global regulatory perspectives

Regulators across the globe are increasingly recognizing their role in fostering innovation, with many countries competing to either cement their position as a leading world financial center or disrupt the market’s status quo. Countries such as Singapore and Australia are competing with regulators in the United Kingdom and the United States to take a leading role in encouraging the development of RegTech solutions through learning labs, direct funding, and “regulatory sandboxes.” RegTech solutions also offer the potential to reinvent and streamline approaches to the regulatory and supervisory process itself through the use of real-time surveillance, distributed ledger technologies (blockchain), and data analytics. For financial institutions, implementing RegTech solutions that lead to improved data protection and quality, customer suitability standards, and audit trails may engender a favorable supervisory response. Additionally, regulators are beginning to provide clearer guidance around outsourcing requirements and privacy laws related to cloud computing use and other related technologies, which will likely shape new industry standards and further enable implementation of these initiatives. There may also be a potential role for other governmental entities outside of the traditional financial services spectrum to support financial innovation. For example, in the United States, the Department of Commerce or other bureaus within the Department of Treasury may consider ways to foster innovation to achieve a mission of economic growth.
As regulatory authorities and central banks stake out their positions, examples abound worldwide of transformative initiatives intended to support the creation of a vibrant ecosystem for financial innovation.

The nexus between regulation and technology innovation
How KPMG can help

As a trusted regulatory advisor, KPMG LLP (KPMG) understands which technologies, including RegTech solutions, enable the achievement of business performance and compliance to deliver these insights to our clients.

KPMG’s Risk Consulting practice has a significant global footprint with over 23,000 professionals located in 93 countries. Our professionals help organizations transform risk into a competitive advantage while navigating their most complex business issues. We offer deep knowledge and insightful opinions to help firms manage risk and create value in a dynamic environment in which outcomes must be managed strategically and with agility. We bring a forward-thinking, global mindset to help align corporate strategy and culture, protect financial assets from reputational damage, and work collaboratively to improve our clients’ decision-making and operational effectiveness.

We have subject matter professionals from multiple disciplines that provide an integrated approach across our global network of firms and focus on creating a suite of technology tools to help clients transform their business models through automation and integration. Specialists from various areas, including risk, compliance, forensics, IT, data and analytics, and strategy, design solutions to address regulatory issues. Working shoulder-to-shoulder with our clients, we use our RegTech research and insights to solve our clients’ most complex business problems.

We provide practical ideas and informed risk perspectives, tailored to each client’s circumstances, to help develop transformational strategies, including RegTech solutions, as well as the capabilities required to deliver sustainable change that drives business performance.

Across the globe, our dedicated IT Advisory group has over 10,760 professionals, of which 4,275 are deeply specialized within risk consulting. KPMG’s IT Advisory services assist our clients with navigating new emerging technologies, developing processes to protect information assets, addressing assurance over third-party systems, and aligning their IT audit capabilities and governance with their firms’ business strategy and complex regulatory requirements. We provide forward-thinking, resilient, and sound advice on timely and complex technology issues to help guide our clients toward the most effective RegTech solutions.

In addition to our regulatory knowledge, we have developed unique capabilities to assist in our clients’ RegTech journeys. KPMG’s credentials rest with our ability to execute and deliver our regulatory knowledge into actual solutions, including third-party or customized technology.

The KPMG Innovation/Technology Lab focuses on mining, sensing, and understanding the signals of change through a people-first lens. Our professionals assist clients with exploring these signals and translating them into business model strategy and operating model enablement aimed at revenue optimization, cost reduction, and risk mitigation.
The KPMG Strategic Alliance Program allows us to combine forces with many of the world’s leading service and technology providers. Being solution agnostic enables KPMG to deliver comprehensive solutions that help our clients address their toughest business challenges. Our strategic alliances complement and extend our deep business and technology experience.

KPMG’s Executive Share Forums are another platform where we foster the dialogue between decision makers around key industry topics, with the education and application of RegTech being a key focus in 2017 and beyond.

KPMG’s Global FinTech practice uses our worldwide network of regulatory knowledge and our teaming with the global FinTech startup community to help our clients identify the technology partner, equity investment, or full acquisition opportunity that will be specifically focused on our clients RegTech needs and opportunities. KPMG is the exclusive advisory alliance partner with Matchi.biz, the innovative FinTech matchmaking platform that connects banks and insurance companies with financial services technology start-ups and innovations sourced from across the globe.

Whether you seek advice for targeted change solutions or end-to-end support for an enterprise-wide transformation, KPMG is prepared to marshal all of our strengths – knowledge, experience, relationships, technology, and commitment – to work in an integrated fashion across our global network to assist you with executing the appropriate solution for your firm.
KPMG’s client success stories

Our RegTech solutions assist financial institutions with streamlining their processes and controls around complex regulatory obligations, reigning in compliance cost, and protecting their brand from reputational damage. Prominent client experiences include stress testing and capital planning (e.g., CCAR/DFAST), regulatory reporting automation, and compliance transformation.

KPMG Regulatory Ecosystem

<table>

<th>A Top 10 U.S.-headquartered bank with multinational operations.</th>
</tr>
</thead>
</table>
| Challenge | — Harnessing automation to sustainably enhance their compliance and regulatory change program through the inventorying, mapping, and reporting of core business data (processes, regulatory requirements, risks, controls, policies, procedures, test scripts, and attributes) at the point of execution level of detail.  
— Establishing a business process mapping standard, including an infrastructure for creating and maintaining business process maps inclusive of core business data overlays. |
| Enabling Technology | Our subject matter professionals used innovative capabilities from KPMG’s Regulatory Ecosystem technology to curate a central repository of business processes, tied to regulations, risks, controls, policies, and procedures. These capabilities also support clients in their regulatory obligation mapping, risk and control assessments through a standardized testing methodology and process, and regulatory change management. In addition, these solutions enable the execution of a robust monitoring and testing function. |
| Results | — Deployment of leading project management methodologies alongside an automated regulatory ecosystem that enabled the client to address regulatory actions in a thoughtful and efficient manner.  
— Core capabilities provided to inventory, sustain, map, and report on core business data.  
— Testing and monitoring results can now be linked directly to the various core business process maps and automated updates populate the process maps with the most current core business data.  
— Identification of a business process mapping standard that can be applied in a sustainable manner as changes occur. |
