The value of Information Management in the construction and infrastructure sector

This summary document has been prepared as part of the full report. The value of information management in the construction and infrastructure sector, for the University of Cambridge's Centre for Digital Built Britain, dated June 2021. The findings presented here should be read in conjunction with that full report.

What is Information Management?

A vast amount of information is created, managed and used throughout the asset lifecycle. Information Management improves the quality, availability and timeliness of this information. It facilitates more efficient and effective decision-making and investments across the asset lifecycle, and is a key enabler of digital transformation.

This summary document has been prepared by KPMG LLP (“KPMG”) as part of the full report, ‘The value of Information Management in the construction and infrastructure sector' and has been prepared solely for the University of Cambridge (“the Client”) in accordance with the terms of engagement agreed by the Client with KPMG. The figures presented in this summary document are based on illustrative forecasts, projections or estimations using assumptions provided by the Client and stakeholder organisations involved in the research’s case study analysis, together with models operated by KPMG. KPMG does not make any guarantee that these forecasts, projections or estimations will be achieved. The limitations on the content of this document and its use are outlined in full in KPMG’s full report – see the Important Notice on page 1.
