A new definition of and clarifications on accounting estimates

Highlights
– What’s the issue?
– A focus on accounting estimates
– Effective date and transition

What’s the issue?
Distinguishing between accounting policies and accounting estimates is important because changes in accounting policies are generally applied retrospectively, while changes in accounting estimates are applied prospectively. The approach taken can therefore affect both the reported results and trends between periods.

The International Accounting Standards Board (the Board) has noted diversity in practice in making this distinction because the term accounting estimates was not defined and the previous definition of a change in accounting estimate was unclear.

The Board has now issued amendments to IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors to clarify how companies should distinguish changes in accounting policies from changes in accounting estimates, with a primary focus on the definition of and clarifications on accounting estimates.

A focus on accounting estimates
The amendments introduce a new definition for accounting estimates: clarifying that they are monetary amounts in the financial statements that are subject to measurement uncertainty.

The amendments also clarify the relationship between accounting policies and accounting estimates by specifying that a company develops an accounting estimate to achieve the objective set out by an accounting policy.

Developing an accounting estimate includes both:
– selecting a measurement technique (estimation or valuation technique) – e.g. an estimation technique used to measure a loss allowance for expected credit losses when applying IFRS 9 Financial Instruments; and

1 Measurement uncertainty is defined in the Appendix to the 2018 Conceptual Framework as the ‘uncertainty that arises when monetary amounts in financial reports cannot be observed directly and must instead be estimated’.
– choosing the inputs to be used when applying the chosen measurement technique – e.g. the expected cash outflows for determining a provision for warranty obligations when applying IAS 37 Provisions, Contingent Liabilities and Contingent Assets.

The effects of changes in such inputs or measurement techniques are changes in accounting estimates.

The definition of accounting policies remains unchanged.

The amendments also provide two examples as illustrated below on the application of the new definition.

<table>
<thead>
<tr>
<th>Accounting estimate</th>
<th>Fair value of an investment property</th>
<th>Fair value of a cash-settled share-based payment liability</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Monetary amount subject to measurement uncertainty?”</td>
<td>✔️</td>
<td>✔️</td>
</tr>
<tr>
<td>“Output of a measurement technique used in applying the accounting policy?”</td>
<td>✔️</td>
<td>✔️</td>
</tr>
<tr>
<td>“Requires use of judgements and assumptions?”</td>
<td>✔️</td>
<td>✔️</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Examples of changes in accounting estimates</th>
<th>Change in valuation technique from income approach to market approach</th>
<th>Change in input – i.e. expected volatility of share price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change in accounting policy?</td>
<td>Measure investment property at fair value</td>
<td>Measure liability at fair value</td>
</tr>
</tbody>
</table>

**Effective date and transition**

The amendments are effective for periods beginning on or after 1 January 2023, with earlier application permitted, and will apply prospectively to changes in accounting estimates and changes in accounting policies occurring on or after the beginning of the first annual reporting period in which the company applies the amendments.

To find out more about the amendments, speak to your KPMG contact.
