KPMG Online Data Protection Training

The Need for Data Protection Training

Given the accelerating pace at which data is created and collected daily, some argue that information has replaced oil as the world's most valuable resource. Enterprises that can leverage the data they collect may derive significant competitive advantage. However, with this benefit comes significant responsibility, as regulators continue to demand organizations to implement adequate data privacy practices and controls to protect personal data.

The Data Protection Act, 2021 (DPA, 2021) requires organisations to implement continuous training and awareness for end users and data handlers. This will ensure that relevant personnel are equipped with adequate knowledge of their responsibilities and requirements of the regulation to deal with personal data.

Our Solution

Our approach to data protection training consists of a suite of learning modules which provide an in-depth understanding of Data Protection and Privacy under the Zambian Data Protection Regulation (ZDPR). This training is delivered via a Learning Management System (LMS) offering an interactive self-paced learning style that provides flexibility for learners.

The awareness training is more than a list of do's and don'ts – it focuses on promoting a practical understanding of the regulation and the vital role of individual staff members in safeguarding themselves and their organization.

Combining the extensive knowledge of KPMG's dedicated Cyber and Privacy practice with capabilities in digital creative design and development, we have developed a data protection training platform that allows learners the flexibility and style to learn at their own pace, whenever and wherever.

Each module engages learners through enlightening and interactive content that provide insights into today's data protection regulation, practices, threats, risk, and the vital role played by every individual in an organization.

Data Protection Compliance Guidelines

DPA Overview

Managing Data Breaches

Data Protection Concepts

Benefits of Compliance

Benefits of LMS Delivery

Personal, flexible, self-paced learning

Built-in graded assessment at the end of training module with auto-generated certificate

Organizes eLearning content in one location

Easy distribution of courses to learners

Allows easy tracking of learner progress and performance

Courses and assessments can be taken anytime, anywhere from any device

Conservation of time and money i.e., time-away-from-work cost
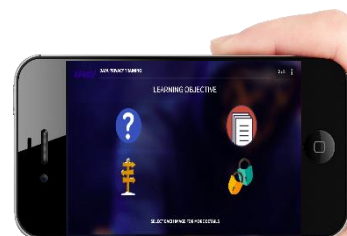

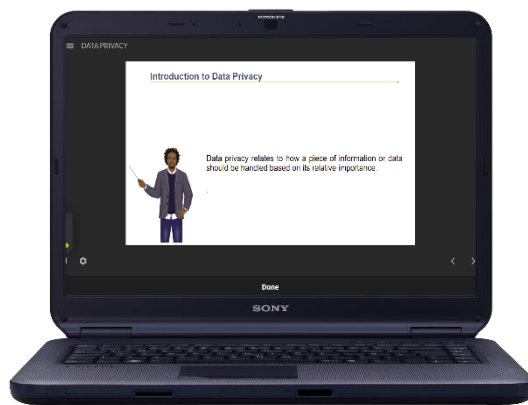

Provides a better way of measuring knowledge through engaging content and user interaction

Features of the LMS

The platform comes with features providing users the flexibility and ease of use that promotes learning and knowledge retention. Key features of the LMS include:

- Stand-by tutor support
- In-session quizzes
- End of course assessment
- Certificate on-the-go

- Course progress tracking
- Voice-over interaction
- Mobile responsiveness
