Environmental Policy

KPMG FinEst Group is committed to protecting the environment and minimizing the negative environmental impacts of its operations and value chain. We encourage environmental awareness among our people and stakeholders and seek to consider environmental aspects in business decisions and daily operations.

Guided by our Purpose and Values, we want to conduct our business responsibly to contribute to a more sustainable future. We align with the Ten Principles of the UN Global Compact and support a precautionary approach to environmental challenges.

Our environmental approach is aligned with KPMG International's global ESG plan, Our Impact Plan. We are committed to reducing greenhouse gas emissions in line with KPMG International's science-based emission reduction targets.

Policy commitments

We are committed to protecting the environment

We comply with applicable environmental legislation and other relevant requirements in the countries where we operate. We apply a precautionary approach and seek to reduce our environmental footprint through responsible resource use, climate action, and the prevention of environmental harm, while continuously improving our environmental performance.

We identify and mitigate our negative impacts

We regularly assess actual and potential environmental impacts, considering stakeholder expectations, business developments, and changes in the regulatory environment. We use the results of these assessments to identify local priorities and to guide our strategy, corporate sustainability work, and environmental management processes. We seek to prevent, and where not feasible, mitigate and reduce negative environmental impacts in the areas most relevant to our operations and value chain.

We engage with our value chain and stakeholders

As a professional services firm, the direct environmental impacts of our own operations are relatively limited. We engage with our suppliers and other value chain partners to support responsible environmental practices and to reduce environmental impacts across our value chain. We believe the best environmental outcomes are achieved when we work together with our value chain partners and other stakeholders.
