Cloud Atlas – The Emergence of VBCloud Malware

TLP : Clear

KPMG. Make the Difference.

Cloud Atlas, also known as Clean Ursa, Inception, Oxygen, and Red October, is an unattributed threat activity cluster that has been active since 2014. In 2024, it used a new, undocumented backdoor called VBCloud, for enhanced data collection and exfiltration tasks while maintaining stealth. The group’s recent campaigns have targeted several sectors in countries such as Russia, Belarus, Canada, Moldova, Israel, Kyrgyzstan, Turkey, and Vietnam with more than 80% of the targets located in Russia.

Cloud Atlas initiates the attack by sending a phishing email containing a malicious RTF document, which when opened by the user, downloads a malicious template. The malicious RTF template exploits a vulnerability to download and execute an HTA file hosted on the attacker’s server. The HTA file leverages alternate data streams to extract and create files in %APPDATA%\Roaming\Microsoft\Windows\, constituting the VBShower backdoor. The backdoor performs operations such as reading and decrypting data files, cleaning downloaded malicious documents, and ensuring the autorun registry key is present. VBShower then proceeds to download and install the PowerShower backdoor, which probes the local network to facilitate further infiltration. The backdoors also download scripts which unpack files into the %ALLUSERPROFILE% directory and create scheduled tasks to execute VBCloud scripts. VBCloud checks the availability of the WebDAV server, creates files to confirm script activity, and downloads payloads for execution. The backdoor also searches for specific file types, collects them into ZIP archives, and uploads these archives to cloud storage before deleting them from the system.

Cloud Atlas’s use of vulnerability exploitation, and multi-staged backdoors underscore the importance of implementing advanced detection systems and adopting proactive threat mitigation to defend against such sophisticated campaigns.

What should you do?

- Monitor Indicators of Compromise (IoCs) in your environment to identify anomalies.
- Ensure your Windows environment is patched to the brim and is protected with multi-factor authentication.
- Conduct a comprehensive, full spectrum, threat assessment exercise to uncover blind spots and improvement areas.

KPMG Cyber Threat Intelligence Platform is an industry defining, research-based capability for enhanced visibility into cyber threats.

Our machine ingestible feeds and analysis are the result of automated, sensor-based intelligence metrics with dedicated, expert insights of each threat to provide you the appropriate context on a timely basis in industry standard formats such as STIX/ TAXII/ MISP.

These feeds are additionally co-related with our industry partners and independent research for additional context. The intelligence obtained is then curated from strategic, tactical and operational perspective to give you a wide-ranging view of cyber threats.

We also assist you with our renowned cyber incident response and threat hunting services in case you identify an active threat in your environment.

We offer a wide-range of services, including:

- Strategic threat intelligence report
- Machine ingestible threat intelligence feeds
- Threat intelligence driven pre-emptive threat hunting exercise
- Cyber Incident Response Services
