KimJongRAT - Dual-Variant RAT Targeting Sensitive Data

TLP : Clear

KPMG. Make the Difference.

KimJongRAT is a sophisticated Remote Access Trojan (RAT) first identified in 2013, believed to be attributed to the DPRK-linked threat actor Kimsuky. Over time, the malware has evolved significantly, adopting a dual-variant delivery mechanism that includes both Portable Executable (PE) files and PowerShell payloads. KimJongRAT latest operation targets government, defense, and research sectors in South Korea, with potential spillover to other regions.

Initial access is achieved via phishing emails impersonating trusted institutions such as the Ministry of Gender Equality and Family and the National Tax Service, directing recipients to a GitHub-hosted URL. The GitHub-hosted URL delivers a ZIP archive containing a decoy PDF and a malicious LNK file. Upon execution, the malicious LNK file triggers a VBScript that decodes and executes a Base64-encoded PowerShell script via mshta, which subsequently downloads and executes HTA and PE files. The HTA files perform system-level tasks like credential extraction, while the PE files inject DLLs into browser processes to harvest sensitive data such as passwords, cookies, and master keys. Persistence is established by modifying Task Scheduler and registry entries, ensuring the malware remains active across reboots. The malware performs anti-VM checks to detect virtualized environments and self-deletes if detected, evading analysis and sandbox detection. It decrypts stolen data using techniques like RC4 and AES, collects system information, and exfiltrates it to the attacker's command-and-control (C2) server over encrypted channels. Additionally, it includes keylogging and clipboard monitoring capabilities, continuously collecting user input, which is stored temporarily and later exfiltrated to the C2 server.

KimJongRAT's continued evolution and deployment highlight its persistence as a sophisticated threat, demanding robust detection, mitigation, and ongoing monitoring efforts.

What should you do?

- Monitor Indicators of Compromise (IoCs) in your environment to identify anomalies.
- Ensure your Windows environment is patched to the latest versions as per the OEM and is protected with multi-factor authentication.
- Conduct a comprehensive, full spectrum, threat assessment exercise to uncover blind spots and improvement areas.

KPMG Cyber Threat Intelligence Platform is an industry defining, research-based capability for enhanced visibility into cyber threats.

Our machine ingestible feeds and analysis are the result of automated, sensor-based intelligence metrics with dedicated, expert insights of each threat to provide you the appropriate context on a timely basis in industry standard formats such as STIX/ TAXII/ MISP.

These feeds are additionally co-related with our industry partners and independent research for additional context.

The intelligence obtained is then curated from strategic, tactical and operational perspective to give you a wide-ranging view of cyber threats.

We also assist you with our renowned cyber incident response and threat hunting services in case you identify an active threat in your environment.

We offer a wide-range of services, including:

Strategic threat intelligence report

Machine ingestible threat intelligence feeds

Threat intelligence driven pre-emptive threat hunting exercise

Cyber Incident Response Services

KPMG in India Cyber Response Hotline: 1800 2020 502
